Contact information

In 1989, the Nordic Council of Ministers decided to introduce a voluntary official ecolabel, the Nordic Swan Ecolabel. These organisations/companies operate the Nordic Ecolabelling system on behalf of their own country's government. For more information, see the websites:

What is a Nordic Swan Ecolabelled cosmetic product?

All cosmetic products covered by the EU Cosmetics Regulation with subsequent amendments, wet wipes, animal care products, sex lubricants and medical lubricants can be Nordic Swan Ecolabelled.

Nordic Swan Ecolabelled cosmetic products are some of the products that have the lowest impact on their environment in their category and they meet both environmental and health requirements. Requirements are set on the environmental properties and health properties of the ingoing substances and on the packaging.

The products go down the drain after use, either directly such as soap, shampoo, and toothpaste, or indirectly by washing bodies, hair, or clothes, such as lotions, creams, hairstyling products and make-up. Properties like biodegradability, bioaccumulability and aquatic toxicity are therefore essential for all ingredients.

Cosmetic products come into direct contact with the body. Therefore, Nordic Ecolabelling also sets strict requirements on the substances with potentially effects that are harmful to health.

Sustainable extraction of renewable raw materials is a vital global issue with a major environmental impact. Nordic Ecolabelling raises awareness of this issue via the requirement for sustainably produced palm oil, which contributes to the production of more sustainable raw materials.

The packaging requirements ensure a high filling degree and stimulate resource efficiency and circular economy by limiting the use of packaging materials. Requirements on packaging design ensure packaging that is recyclable.

Nordic Swan Ecolabel cosmetic products:

- Meet strict health requirements for chemicals, including a ban on substances classified to cause cancer, as toxic to reproduction or to potentially damage genetic material. Also identified or potential endocrine disruptors on up-to-date lists from EU and national authorities or by classification are banned, and it is not allowed to add PFAS.
- Contain no fragrances if the skin or hair care product is intended for babies or children.
- Meet strict environmental requirements for chemicals to avoid long-term, negative effects in nature (biodegradability), to avoid harmful chemicals accumulating in animals and humans (bioaccumulation), and to avoid substances that are toxic to, for example, fish and crustaceans (ecotoxicity).
- Responsible sourcing of renewable raw materials is promoted, and any palm oil or palm kernel oil in the product is RSPO certified.
- Have packaging that contributes to a circular economy. The amount of packaging is low, and design and material composition promote recycling.
- Wet wipes contain no plastic fibres.

Why choose the Nordic Swan Ecolabel?

- Licensees may use the Nordic Swan Ecolabel trademark for marketing. The Nordic Swan Ecolabel is a very well-known and well-reputed trademark in the Nordic region.
- The Nordic Swan Ecolabel is a simple way of communicating environmental focus and commitment to customers.
- The Nordic Swan Ecolabel clarifies the most important environmental impacts and thus shows how a company can cut emissions, resource consumption and waste management.
- Environmentally suitable operations prepare licensees for future environmental legislation.
- Nordic Ecolabelling provides businesses with guidance on the work of environmental improvements.
- The Nordic Swan Ecolabel not only covers environmental issues but also quality requirements since the environment and quality often go hand in hand. This means that a Nordic Swan Ecolabel licence can also be seen as a mark of quality.

What can carry the Nordic Swan Ecolabel?

All cosmetic products covered by the EU Cosmetics Regulation (EC) No 123/2009 with subsequent amendments, such as skin care products, hair care products, decorative cosmetics, perfumes, and hygiene products can be Nordic Swan Ecolabelled.

According to the Regulation, “cosmetic product” means any substance or mixture intended to be placed in contact with the external parts of the human body (epidermis, hair system, nails, lips and external genital organs) or with the teeth and the mucous membranes of the oral cavity with a view exclusively or mainly to cleaning them, perfuming them, changing their appearance, protecting them, keeping them in good condition or correcting body odours.

Wet wipes are included in the definition of the product group, as the liquid on the wipe is intended for functions as described above.

Hand dishwashing detergents with added skin protection, perfumed toilet paper or tissues with lotion, for example, do not meet the above criteria and are not included in the definition.

Mix-it-yourself cosmetics kits, where all ingredients and mixing instructions are provided as a single unit, are covered by the cosmetics products regulation and can be Nordic Swan Ecolabelled. This also includes concentrated products in any form, that are diluted with water by the user to form the finished product.

Hand dishwashing detergents with added skin protection, perfumed toilet paper or tissues with lotion, for example, do not meet the criteria of the Cosmetic products regulation and cannot be Nordic Swan Ecolabelled.

In addition to products within the scope of the cosmetic products regulation, the product group also includes a number of other product types:

Lubricants for medical purposes (such as medical examinations with or without e.g. an ultrasound probe) as well as lubricants marketed as “sex products” (such as lube, anal creams, and orgasm gels) can be Nordic Swan Ecolabelled when the formulations are similar to cosmetic products. Lubricants for medical purposes are part of the scope of the Medical Device Regulation (EC) No 726/2004, which can also be the case for “sex products”.

Products for animals, but otherwise corresponding to cosmetic products for human use, can be Nordic Swan Ecolabelled when their formulations are similar to cosmetic products.

Products within the scope of the Biocides Regulation 528/2012 cannot be Nordic Swan Ecolabelled. Products that are marketed as being antibacterial, antimicrobial, antiseptic and/or disinfectant or claim to have ingredients that have these properties cannot be Nordic Swan Ecolabelled, as this does not comply with the Biocides Regulation 528/2012.

The product group includes both products for consumers and for professional use.

How to apply

Application and costs

For information about the application process and fees for this product group, please refer to the respective national web site, see first in this document.

What is required?

The application consists of an application form/web form and documentation showing that the requirements are fulfilled.

Each requirement is marked with the letter O (obligatory requirement) and a number. All requirements must be fulfilled to be awarded a licence.

The text describes how the applicant shall demonstrate fulfilment of each requirement. There is also an icon in the text to make this clearer:

 Documentation required

 On-site inspection

All information submitted to Nordic Ecolabelling is treated confidentially. Suppliers can send documentation directly to Nordic Ecolabelling, and this will also be treated confidentially.

Licence validity

The Nordic Swan Ecolabel licence is valid providing the criteria are fulfilled and until the criteria expire. The validity period of the criteria may be extended or adjusted, in which case the licence is automatically extended, and the licensee informed.

Revised criteria shall be published at least one year prior to the expiry of the present criteria. The licensee is then offered the opportunity to renew their licence.

On-site inspection

In connection with handling of the application, Nordic Ecolabelling normally performs on-site inspection visit/-s to ensure adherence to the requirements. For such an inspection, data used for calculations, original copies of submitted certificates, test records, purchase statistics, and similar documents that support the application must be available for examination.

Queries

Please contact Nordic Ecolabelling if you have any queries or require further information. See contact information first in this document. Further information and assistance (such as calculation sheets or electronic application help) is available. Visit the relevant national website for further information.

1 Requirements

1.1 Definition of the product group

All cosmetic products covered by the EU Cosmetics Regulation with subsequent amendments, such as skin care products, hair care products, decorative cosmetics, and perfumes can be Nordic Swan Ecolabelled.

According to the Regulation, “cosmetic product” means any substance or mixture intended to be placed in contact with the external parts of the human body (epidermis, hair system, nails, lips and external genital organs) or with the teeth and the mucous membranes of the oral cavity with a view exclusively or mainly to cleaning them, perfuming them, changing their appearance, protecting them, keeping them in good condition or correcting body odours. Wet wipes are included in the definition of the product group, as the liquid on the wipe is intended for functions as described above. Hand dishwasher detergents with added skin protection, perfumed toilet paper or tissues with lotion, for example, do not meet the above criteria and are not included in the definition.

Mix-it-yourself products (cosmetics kits), in which all the ingredients together with instructions for mixing the product are sold as a combined unit/single product are covered by the Cosmetics Regulation and can be Nordic Swan Ecolabelled.

Wet wipes can be Nordic Swan Ecolabelled even if there is only lotion in the product, which is covered by the Cosmetics Regulation. Animal care products can be Nordic Swan Ecolabelled although these are not covered by the Cosmetics Regulation.

Lubricants for medical purposes (such as medical examinations with or without e.g. an ultrasound probe) as well as lubricants marketed as “sex products” (such as lube, anal creams, and orgasm gels) can be Nordic Swan Ecolabelled when their formulations are similar to cosmetic products. Lubricants for medical purposes are

part of the scope of the Medical Device Regulation, which can also be the case for “sex products”.

Products covered by the Biocides Regulation 528/2012 cannot be Nordic Swan Ecolabelled. Products that are marketed as being antibacterial, antimicrobial, antiseptic and/or disinfectant or claim to have ingredients that have these properties cannot be Nordic Swan Ecolabelled, as this does not comply with the Biocides Regulation 528/2012.

1.2 Other definitions

For the purpose of this document, the following definitions shall apply.

Definition	Description
Due Diligence system	This means implementing procedures and measures to ensure that your products come from sources that are deforestation-free or comply with the country's laws. Licensees need to gather supply chain information, assess risks of non-compliant supply chains, and take necessary actions to mitigate any identified risk of sourcing non-compliant raw materials.
Rinse-off product	A cosmetic product marketed as intended to be removed with water after use in normal conditions. This includes products that according to the usage instructions are rinsed off with water immediately after use (e.g. shampoo, conditioner, soaps, shaving cream, bath foam and scrubs, cleansing products/gels, hair treatments and peels). Solid shampoo/conditioner and shower bars are also included. Note that toothpaste and mouthwash is considered rinse-off but must meet requirement O20 Biodegradability and aquatic toxicity instead of O18 aNBO and O19 CDV.
Leave-on product	A cosmetic product marketed as not intended to be removed with water after use in normal conditions. This includes products stay on the skin (e.g. creme, lotion, perfumes). Products that according to the usage instruction are rinsed off with cotton wool, cotton pads etc. are also included (e.g. cleansing lotion, eye make-up remover). Note that lubricants are considered leave-on.
Ingoing substances	All substances in the cosmetic product including additives (e.g., preservatives and stabilisers) in the raw materials. Substances known to be released from ingoing substances (e.g., formaldehyde, arylamine, in situ-generated preservatives) are also regarded as ingoing substances.
Impurities	Residuals, pollutants, contaminants etc. from production, incl. production of raw materials that remain in the cosmetic product in concentrations less than 100 ppm for rinse-off products and 10 ppm for leave-on products if no other limit is stated in the requirement. Impurities in the raw materials exceeding concentrations of 1000 ppm are always regarded as ingoing substances, regardless of the concentration in the cosmetic product. Examples of impurities are residues of the following: residues or reagents incl. residues of monomers, catalysts, by-products, scavengers, and detergents for production equipment and carry-over from other or previous production lines. The impurity limits apply to each individual substance that is excluded, i.e., Impurities with the same classification in different raw materials shall not be summed up to comply with the limit. The same contaminants in different raw materials also do not need to be summed.
Microplastics	Synthetic polymer microparticles as defined in REACH Regulation ((EC) No 1907/2006), Annex XVII, Entry no. 78: Synthetic polymer microparticles: polymers that are solid, and which fulfil both of the following conditions: a) are contained in particles and constitute at least 1% by weight of those particles; or build a continuous surface coating on particles. b) at least 1% by weight of the particles referred to in point (a) fulfil either of the following conditions: (i) all dimensions of the particles are equal to or less than 5 mm. (ii) the length of the particles is equal to or less than 15 mm and their length to diameter ratio is greater than 3. The following polymers are excluded <i>from</i> this designation: a) polymers that are the result of a polymerisation process that has taken place in nature, independently of the process through which they have been extracted, which are not chemically modified substances. b) polymers that are biodegradable as proved in accordance with Appendix 15 [to REACH, Regulation (EC) No 1907/2006]. c) polymers that have a solubility greater than 2 g/L as proved in accordance with Appendix 16 [to REACH, Regulation (EC) No 1907/2006].

Definition	Description
	d) polymers that do not contain carbon atoms in their chemical structure. <i>Note that the following "Conditions of restriction" paragraphs apply: 1 (concentration limit in mixtures), 2 (definitions), 3 (particle size limits). The remaining points do not apply, e.g. 4 (Paragraph 1 shall not apply to the placing on the market of:), e.g. 4(a) "synthetic polymer microparticles, as substances on their own or in mixtures, for use at industrial sites", 5 (derogations), e.g. 5 (b) "synthetic polymer microparticles the physical properties of which are permanently modified during intended end use in such a way that the polymer no longer falls within the scope of this entry".</i>
Nanomaterials	Insoluble or biopersistent and intentionally manufactured materials with one or more external dimensions or an internal structure in the region of 1-100 nm. <i>Nordic Ecolabelling reserves the right to adopt a newer definition, should the Cosmetic Products Regulation ((EC) No 1223/2009) implement an adjusted definition.</i>
Surfactants	Any organic substance, which has surface-active properties, and which consists of one or more hydrophilic and one or more hydrophobic groups of such a nature and size that it is capable of reducing the surface tension of water. Substances on the DID-list with number 2001-23xx are considered surfactants and substances with number 2401-26xx are not considered surfactants.
DID-list	The DID-list (Detergent Ingredient Database) part A contains information on toxicity and degradability of several substances that are used in cosmetic products. If an ingoing substance is included on the DID-list, the data from the DID-list must be used for calculations of the amount of aerobic/anaerobic non-biodegradable organics, the critical dilution value and biodegradability and toxicity. If a substance is not included on the DID-list, or data is missing, the methods described in part B of the DID-list must be used. For this criteria generation, the DID-list dated 2023 or later versions apply. See further details in Appendix 7. The DID-list can be obtained from the Nordic Swan Ecolabelling websites.
Wet wipes	Pre-wetted cloths of non-woven fabric, where the lotion is covered by the EU Cosmetic Products Regulation.
Animal care product	Any product intended to be placed in contact with animal hair or skin to clean them or to improve the condition of it, such as shampoos, conditioners and sun protection for animals
Sex lubricants	Lubricants with formulations similar to cosmetic products, that are marketed as "sex products" (such as lube, anal creams, and massage oil).
Medical lubricants	Lubricants with formulations similar to cosmetic products, that are marketed for medical purposes such as medical examinations with or without e.g. an ultrasound
Products for consumer use	Products that are marketed towards retailers and/or consumers. Products are considered for consumer use if 20% or more of sales are to consumers
Products for professional use	Products that are marketed for use in professional contexts such as healthcare, food industry, institutions and within the public sector. Products are considered for the professional market if more than 80% of sales are to professional users.
Primary packaging	In accordance with EU Directive 94/62/EC on packaging and packaging waste, the term "primary packaging" is defined as consumer packaging, i.e., packaging conceived to constitute a sales unit to the final user or consumer at the point of sale.
Packaging component	A component is a component that is easily separable from other components without the use of tools. Examples are bottles, jars, detachable lids, pumps with thread necks, and labels. A component is also characterized by having its own identification reference to which appendices, purchase no., technical drawing etc. apply. A subcomponent is characterized by being an integrated undetachable part of a main component and by not having its own identification reference (e.g. metal part in pump, tamper evident sealing on tube).
Take-back system	Take-back system refers to packaging that are taken back, washed and refilled. This does not include packaging that is a part of a recycling system where the packaging is recycled into new plastic.
Separability of packaging components	Separability indicates that the product packaging can be separated into each their material and polymer fraction. If it contains a thread neck, it is by default separable. If it does not, action should be taken e.g by documenting that it can be separated without use of tools. If components are not separable, they will be evaluated as one components based on the biggest ingoing element by weight.
Dispensing systems	Dispensing systems cover dosage devices such as dispensing pumps and valves, spray pumps, trigger pumps, bubble pumps, propellant nozzles and pipettes/droppers.
Products for domestic use	Products for domestic use are products sold in retail to private consumers.
HoReCa sector	Hotel, restaurant and catering sector.

Definition	Description
Secondary raw material for packaging	Secondary raw materials are defined here as residual products from other production processes, such as waste products from the food industry, by-products such as straw from grain production, by-products from maize and dried palm leaves. PFAD from palm oil is not counted as a residual/waste product.
Bio-based material for packaging	Bio-based means that the material consists of biomass that may have undergone physical, chemical, or biological treatment(s). Biomass has a biological origin but excludes material that is found embedded in geological and/or fossil formations. Examples of biomass are: (all or parts of) plants, trees, algae, marine organisms, microorganisms, animals, etc.
Pre-consumer recycled	Material in the pre-consumer phase: Material that has been taken from the waste flow during the manufacturing process. The exception is the re-use of material that is generated in a process, e.g., waste that can be recycled within the same process that generated it.
Post-consumer recycled	Post-consumer/commercial recycled material is defined in the requirement according to ISO 14021:2016: "Post-consumer/commercial" is defined as material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.
Concentrated product, main packaging	Packaging containing the undiluted concentrated product, which is to be diluted with water in a refill packaging.
Concentrated product, refill packaging	Packaging in which the concentrated product is diluted with water and thus refilled multiple times.

1.3 General requirements

Unless otherwise stated, the requirements in the criteria document and accompanying appendices apply to all ingoing substances in the Nordic Swan Ecolabelled product, and impurities are exempted from the requirements.

01 Description of the product

The applicant must give detailed information on the cosmetic product to which the application relates. The following information is required:

- Description of the product
- A complete formulation for the product. Foil that is not removed before use, and that is water soluble is considered part of the formulation. The formulation must, if possible, include for each ingoing substance:
 - Trade name
 - Chemical name
 - INCI name (International Nomenclature of Cosmetic Ingredients)
 - Amount (both with and without solvents, e.g., water)
 - CAS No. and/or EC number
 - DID number for substances that can be placed in the DID-list 2023 or later versions*
 - Function

If a raw material consists of several substances, data for all ingoing substances is to be stated in the formulation.

* *DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a detailed description.*

🏠 Description of the product, e.g., label or other documentation.

☞ Complete formulation in line with the requirement, Nordic Ecolabelling's calculation sheet for cosmetic product can be used.

☞ Safety data sheet for each raw material in line with prevailing legislation in the country of application, e.g., Annex II to REACH (Regulation 1907/2006/E2EC).

02 SCCS

Recommendations from the EU's Scientific Committee on Consumer Safety, SCCS Opinions¹, must be complied with where there is an unambiguous conclusion from SCCS. In cases where there is a direct conflict with other requirements in this criteria document, it is always the most restrictive requirement that applies.

☞ Appendix 1 or equivalent declaration completed and signed.

03 Supply chain policy and code of conduct

The licence holder must have a) supply chain policy and b) a Code of Conduct for responsible sourcing of minerals and renewable raw materials* used in the cosmetic product. The supply chain policy and code of conduct must be both public and communicated to the supply chain. Licence holders that are micro companies with maximum 10 employees are exempted.

a) The supply chain policy must include the following:

- A policy statement committing the licence holder to respect human rights and the environment within its operations and supply chain; this includes a commitment to support suppliers' compliance with the supplier code of conduct by engaging in responsible purchasing practices.
- Commitment to comply with all applicable local, national- and international environmental laws and regulations, as well as all applicable health and safety regulations.
- A description for governance processes in place for Due Diligence; this includes routines for assessing biodiversity and deforestation risk along the whole supply chain.

b) The supplier Code of Conduct must inform all suppliers of what is expected of them with respect to the Licensee's supply chain policy regarding human rights and protecting the environment.

** Renewable raw materials compose of biomass and that can be continually replenished for example wood, crops, marine products, organic waste or be recycled raw materials*

☞ Submit supply chain policy according to the requirement or reference to info on webpage.

☞ Submit supplier Code of Conduct according to the requirement or reference to info on webpage.

☞ Submit information on how the supply chain policy and supplier Code of Conduct are public and communicated to the supply chain.

04 Certified raw materials from oil palms

If renewable raw materials from palm oil are used in the product, the palm oil/palm kernel oil must be RSPO certified. This also includes by-products, residues, and

¹ https://health.ec.europa.eu/scientific-committees/scientific-committee-consumer-safety-sccs_en

waste fractions from palm oil industries, such as palm fatty acid distillate and palm effluent sludge. Traceability must be ensured by Mass Balance, Segregated, or Identity Preserved. Book and Claim are not accepted. The requirement does not apply to substances derived from palm oil/palm kernel oil in raw materials where the substances amount to < 1% in the cosmetic product.

- ☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.
- ☞ A valid RSPO Supply chain certificate from all relevant raw material manufacturers/suppliers or a valid RSPO Supply chain certificate from the manufacturer of the cosmetic product.
 - By request, the manufacturer of the cosmetic product must present invoices/delivery notes/order confirmation that the palm oil purchased is RSPO certified and information about traceability system (Mass Balance, Segregated or Identity Preserved accepted).
 - By request, the manufacturer of the cosmetic product must, if they are RSPO Chain of Custody certified, present a third party-controlled balance sheet showing RSPO certified raw materials being accounted/recorded to the cosmetic product(s).

O5 Classification of ingoing substances

Ingoing substances must not be classified with the hazard codes listed in the table below, in accordance with CLP Regulation 1272/2008.

Table 1 Classification of ingoing substances

Hazard class	Hazard class and category	Hazard code
Carcinogenicity*	Carc. 1A or 1B Carc. 2	H350 H351
Germ cell mutagenicity*	Muta. 1A or 1B Muta. 2	H340 H341
Reproductive toxicity*	Repr. 1A or 1B Repr. 2 Lact.	H360 H361 H362
Respiratory or skin sensitisation**	Resp. Sens. 1, 1A or 1B Skin Sens. 1, 1A or 1B	H334 H317
Acute toxicity***	Acute Tox. (oral) 1 or 2	H300
Hazardous to aquatic environment	Aquatic Chronic 1	H410, M>1****
Endocrine disruption for human health****	ED HH 1 ED HH 2	EUH380 EUH381
Endocrine disruption for the environment****	ED ENV 1 ED ENV 2	EUH430 EUH431
Persistent, Bioaccumulative and Toxic properties****	PBT	EUH440
Very Persistent, Very Bioaccumulative properties****	vPvB	EUH441
Persistent, Mobile, and Toxic properties Very Persistent, Very Mobile properties	PMT vPvM	EUH450 EUH451

* Including all combinations of stated exposure routes and stated specific effect. For example, H350 also covers classification H350i.

** The following substances are exempted:

- Enzymes that are in liquid form or in solid form as granulates (including stabilisers in the enzyme raw material) and not used in spray products.

- *Fragrance can be included in the final product according to the fragrance requirements O9-O11*
- *Tocopherol acetate (DID no. 2609) and tocopherol*
- *Amidoamines in betaine raw materials, such as cocamidopropyl betaine (CAPB): Max. 1% of the betaine active content in the raw material, e.g. for raw materials with 30% betaine active content max. $1\% \times 30\% = 0.3\%$ amidoamine in the raw material.*

**** Only applies to lip products, toothpaste, oral hygiene products, and nipple cream. All other products are exempted.*

***** See also O7 Excluded substances for additional requirements for potential or identified endocrine disruptors and PBT/vPvB substances*

****** M is the multiplying factor used for substances classified as chronic aquatic toxicity category 1, as stated in the CLP Regulation (EC) No 1272/2008.*

☞ Safety data sheet for all ingoing substances in line with prevailing European legislation (Annex II to REACH Regulation, 1907/2006/EC).

☞ Appendix 1 or equivalent declaration completed and signed.

☞ Appendix 2 or equivalent declaration completed and signed by all raw material manufacturers/suppliers.

O6 Microplastics

Microplastics* must not be present as ingoing substances in the cosmetic product and must not be added to the product during manufacturing.

An exemption for sunscreen products applies until 17. October 2029.

An exemption for high-molecular-weight crosslinked acrylate-based polymers that function as rheology modifiers/thickeners (e.g. carbomers and acrylates/C10-30 alkyl Acrylate Crosspolymer) in leave-on products applies until 17. October 2029, provided that a detailed phase-out plan is prepared by the applicant.

Exemption to the definition of impurities: Microplastic present ≥ 100 ppm in both rinse-off and leave-on products are considered ingoing substances.

Nordic Ecolabelling reserves the right to change the requirement when more guidance from the EU on the restriction of synthetic polymer microparticles in REACH is published.

** Microplastics are synthetic polymer microparticles as defined in REACH Regulation ((EC) No 1907/2006), Annex XVII, Entry no. 78: Synthetic polymer microparticles: polymers that are solid, and which fulfil both of the following conditions:*

- a) are contained in particles and constitute at least 1% by weight of those particles; or build a continuous surface coating on particles.
- b) at least 1% by weight of the particles referred to in point (a) fulfil either of the following conditions:
 - (i) all dimensions of the particles are equal to or less than 5 mm.
 - (ii) the length of the particles is equal to or less than 15 mm and their length to diameter ratio is greater than 3.

The following polymers are excluded from this designation:

- a) polymers that are the result of a polymerisation process that has taken place in nature, independently of the process through which they have been extracted, which are not chemically modified substances.
- b) polymers that are biodegradable as proved in accordance with Appendix 15 [to REACH, Regulation (EC) No 1907/2006].
- c) polymers that have a solubility greater than 2 g/L as proved in accordance with Appendix 16 [to REACH, Regulation (EC) No 1907/2006].
- d) polymers that do not contain carbon atoms in their chemical structure.

N.B. The following "Conditions of restriction" paragraphs apply: 1 (concentration limit in mixtures), 2 (definitions), 3 (particle size limits). The remaining points do not apply, e.g. 4 (Paragraph 1 shall not apply to the placing on the market of:), e.g. 4 (a) "synthetic polymer microparticles, as substances on their own or in mixtures, for use at industrial sites", 5 (derogations), e.g. 5 (b) "synthetic polymer microparticles the physical properties of which are permanently modified during intended end use in such a way that the polymer no longer falls within the scope of this entry".

- 🏠 Appendix 1 or equivalent declaration completed and signed.
- 🏠 Appendix 2 or equivalent declaration completed and signed by all raw material manufacturers/suppliers.
- 🏠 Exemption for high-molecular-weight crosslinked acrylate-based polymers functioning as rheology modifiers/thickeners: Detailed phase-out plan including a timeline provided by the license holder.

07 Excluded substances

The following substances or substance groups must not be present as ingoing substances in the cosmetic product.

- 1,4-dioxane (CAS No. 123-91-1).
Exemption to the definition of impurities: 1,4-dioxane impurities present at ≥ 10 ppm in both rinse-off and leave-on products, are considered ingoing substances.
- 2-ethylhexyl (2E)-3-(4-methoxyphenyl)acrylate (CAS No. 83834-59-7).
- Alkylphenols (AP) (e.g. butylated hydroxy anisole (BHA, CAS No. 25013-16-5), alkylphenol ethoxylates (APEO), and other alkylphenol derivatives (APD).
An exemption is made for BHT (CAS No. 128-37-0) in perfumes in the amount of ≤ 100 ppm, provided that the amount in the cosmetic product is ≤ 1 ppm.
- Bisphenols and bisphenol derivatives belonging to the group of 34 substances that have been identified by ECHA for further EU regulatory risk management that are known or potential endocrine disruptors for the environment or for human health, or that can be identified as toxic for reproduction².
These include: EC/List No. 201-245-8 (BPA), 201-025-1 (BPB), 401-720-1 (4,4'-Isobutylethylidenediphenol), 216-036-7 (BPAF) and its 8 salts (278-305-5; 425-060-9; 443-330-4; 468-740-0; 469-080-6; 479-100-5; 943-265-6; 947-368-7), 201-250-5 (BPS), 201-240-0 (BPC), 204-279-1 (TBMD), 201-618-5 (6,6'-di-tert-butyl-4,4'-butylidenedi-m-cresol), 242-895-2, 248-607-1, 405-520-5 (D8), 217-121-1 (DAB), 227-033-5 (TMBPA), 210-658-2 (BPF), 411-570-9, 277-962-5

² Assessment of regulatory needs: Bisphenols, ECHA, 16 December 2021: Section 2.1: Bisphenols for which further EU RRM is proposed: <https://echa.europa.eu/documents/10162/c2a8b29d-0e2d-7df8-dac1-2433e2477b02>

(contains BPS, 500-086-4 (contains BPA), 500-263-6 (contains BPA), 500-607-5 (contains BPA), 701-362-9, 904-653-0 (contains BPA), 908-912-9 (contains BPF), 926-571-4 (contains BPA), 931-252-8 (contains BPA), 941-992-3 (contains BPS), 943-503-9 (contains BPA).

- Benzalkonium chloride (CAS No. 63449-41-2).
- Boric acid, borates, and perborates.
- Ethylenediamine tetraacetate (EDTA, CAS No. 6381-92-6) and its salts and Diethylenetriamine pentaacetate (DTPA, CAS No. 67-43-6) and its salts.
- Halogenated and/or aromatic solvents*.
- Homosalate (CAS No. 118-56-9).
- Kojic acid (CAS No. 501-30-4).
- Microplastics, see requirement O6.
- Nanomaterials/-particles, as defined according to the Cosmetic Products Regulation ((EC) No 1223/2009)**.

Exemptions are made for:

- a) Synthetic amorphous silica (SAS) used as an abrasive in toothpaste.
 - b) Titanium dioxide (TiO₂) used as a UV-filter approved in SCCS opinion SCCS/1516/13; i.e. TiO₂ may not be photocatalytic, coating must be stable and TiO₂ may not be included in spray products.
- Nitro musks and polycyclic musk compounds.
 - Octocrylene (CAS No. 6197-30-4).
 - Organic chlorine compounds, hypochlorous acid and hypochlorite.
 - Parabens (4-Hydroxybenzoic acid and its salts and esters).
 - PBT and vPvB substances in accordance with REACH Annex XIII, including substances under investigation according to the ECHA PBT assessment list <https://echa.europa.eu/pbt/-/dislist/details/0b0236e1889ab857>
 - Per- and polyfluorinated substances (PFAS).
 - Phthalates (i.e., esters of phthalic acid CAS No. 88-99-3).
 - Potential or identified endocrine disruptors, according to any of the following EU member state initiative "Endocrine Disruptor Lists":

List I: <https://edlists.org/the-ed-lists/list-i-substances-identified-as-endocrine-disruptors-by-the-eu>

List II: <https://edlists.org/the-ed-lists/list-ii-substances-under-eu-investigation-endocrine-disruption>

List III: <https://edlists.org/the-ed-lists/list-iii-substances-identified-as-endocrine-disruptors-by-participating-national-authorities>

N.B. A substance which is transferred to one of the corresponding sublists called "Substances no longer on list", and no longer appears on any of List I-III, is no longer excluded. The exception is those substances on sublist II which were evaluated under a regulation or directive which doesn't have provisions for identifying EDs (e.g. the cosmetic products regulation). For those substances, ED properties may still have been confirmed or suspected. Nordic Ecolabelling will evaluate the circumstances case-by-case, based on the background information indicated on sublist II.

- Quaternary ammonium compounds, which are not readily aerobic biodegradable, such as DTDMAC (CAS No. 61789-80-8), DSDMAC (CAS No. 107-64-2), DHTDMAC (CAS No. 61789-72-8) and DADMAC (CAS No. 7398-69-8).
- Salicylic acid (CAS No. 69-72-7) and its salts (CAS No. 824-35-1 / 18917-89-0 / 59866-70-5 / 54-21-7 / 578-36-9 / 2174-16-5), benzyl salicylate (CAS No. 118-58-1), and ethyl-hexyl salicylate (CAS No. 118-60-5).
- Siloxanes.
Exemptions are made for linear siloxanes in leave-on products.
- Silver, colloidal silver and nanosilver.
- Substances on the REACH Candidate list of SVHC substances
<https://www.echa.europa.eu/candidate-list-table>
- Titanium dioxide (TiO₂, CAS No. 13463-67-7).
Exemptions apply for the following: Products that are not loose powder, in spray form, toothpaste, or lip products (lip balm, lipstick, lip gloss, lip liner, and similar).
- Triclosan (CAS No. 3380-34-5).

* *Solvents are defined as in Commission Directive 1999/13/EC: organic substances with a vapour pressure of at least 0.01 kPa at 20 °C.*

** *Nanomaterials/-particles is defined as insoluble or biopersistent and intentionally manufactured materials with one or more external dimensions or an internal structure in the region of 1-100 nm. Nordic Ecolabelling reserves the right to adopt a newer definition, should the Cosmetic Products Regulation ((EC) No 1223/2009) implement an adjusted definition.*

🏠 Appendix 1 or equivalent declaration completed and signed.

🏠 Appendix 2 or equivalent declaration completed and signed by all raw material manufacturers/suppliers.

O8 Surfactants

All surfactants* in the cosmetic product, irrespective of their function in the product must comply with the following requirements:

- Be readily biodegradable (aerobically) and anaerobically biodegradable.

An exemption for anaerobic biodegradation is made for emulsifiers used in leave-on cosmetics, which only need to be aerobically biodegradable.

- Sodium lauryl sulphate (SLS) is not allowed in toothpaste.

🏠 Reference to the DID-list dated 2023 or later versions. For substances not on the DID-list, or for substances where biodegradation data is missing on the DID-list, biodegradation must be documented according to the guidance in part B of the DID-list and associated data must be presented**.

* *Any organic substance, which has surface-active properties, and which consists of one or more hydrophilic and one or more hydrophobic groups of such a nature and size that it is capable of reducing the surface tension of water.*

** *DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a more detailed description of the DID-list, and requirements for analysis laboratory and test methods*

🏠 Appendix 1 or equivalent declaration completed and signed.

- 🏠 Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

O9 IFRA

All fragrances in the cosmetic product must be added in line with the IFRA's guidelines. The IFRA's (International Fragrance Association) guidelines can be read at https://ifrafragrance.org/docs/default-source/51st-amendment/ifra-51st-amendment---guidance-for-the-use-of-ifra-standards.pdf?sfvrsn=79750005_2.

- 🏠 Appendix 1 or equivalent declaration completed and signed.

- 🏠 Appendix 2 or equivalent declaration completed and signed by all raw material manufacturers/suppliers.

O10 Fragrance free products for babies and children

Fragrance substances/perfumes/flavourings/aromas/fragrance substances in plant extracts must not be added to baby and children's products*.

Exemption: Flavourings are allowed in children's toothpaste, see requirement O21
Oral products: Flavourings, colours, and preservatives.

** Baby/children's products are products that are marketed for or have words such as infant, baby and/or children or pictures of children under the age of 12 years on the label.*

- 🏠 Formulation.

- 🏠 Appendix 1 or equivalent declaration completed and signed.

- 🏠 Label.

O11 Fragrance allergens

All fragrance substances/flavourings/aromas/fragrance substance in plant extract in the cosmetic product must comply with the following requirements:

- Substances with the hazard statement H317 and/or H334 or fragrance allergens listed in Annex III of the Cosmetic Regulation may be included at a maximum of 0.001% (10 ppm) in leave-on products and a maximum of 0.01% (100 ppm) in rinse-off products.

An exemption is made for fragrance allergens in aromas, provided that they are not classified H317/H334 category 1A:

- a) Toothpaste and oral hygiene products for adults may include either of the following:
 - Maximum 6 fragrance allergens from aromas up to <1000 ppm each in the final product
 - Menthol (CAS Nos. 2216-51-5, 89-78-1, 1490-04-6 and 15356-60-2) up to a total of <4000 ppm in the final product and 5 other fragrance allergens from aromas up to <1000 ppm each in the final product.
 - b) Children's toothpaste may include maximum 2 fragrance allergens from aromas up to <1000 ppm each in the final product.
- The following fragrance allergens are prohibited: Oak moss extract (*Evernia prunastri*, CAS No. 90028-68-5) and tree moss extract (*Evernia furfuracea*, CAS 90028-67-4).

- 🏠 Appendix 1 or equivalent declaration completed and signed.

☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

☞ Fragrance allergens list.

O12 Organic colorants

All organic colorants in the cosmetic product must comply with the following requirements:

Must not be bioaccumulative in line with the testing methods in Appendix 7 having a BCF (bioconcentration factor) < 500 or log Kow (logarithmic octanol-water partition coefficient) < 4. Alternatively, the colorant must be approved for use in food.

- Carbon black is prohibited.

☞ Appendix 1 or equivalent declaration completed and signed.

☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

O13 Preservatives

All preservatives in the cosmetic product must be:

- Readily aerobically degradable.
- Not bioaccumulative in line with the testing methods in Appendix 7 having a BCF < 500 or log Kow < 4.

☞ Reference to the DID-list dated 2023 or later versions. For substances not on the DID-list, or for substances where biodegradation data is missing on the DID-list, biodegradation must be documented according to the guidance in part B of the DID-list and associated data must be presented*.

** DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a more detailed description of the DID-list, and requirements for analysis laboratory and test methods.*

☞ Appendix 1 or equivalent declaration completed and signed.

☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

O14 UV filter

All UV filters in the cosmetic product must comply with the following requirements:

- UV filters may only be added to leave-on products and only to protect the user, not the product.
- All organic UV filters contained in the product must either:
 - Not be bioaccumulative in line with the testing methods in Appendix 7 having a BCF < 500 or log Kow < 4
 - or
 - Have a lowest toxicity with NOEC/EC_x > 0.1 mg/l or EC/LC50 > 10.0 mg/l.

Nano UV filters, with exemption to nano TiO₂, are prohibited under requirements O7 Excluded substances.

☞ Appendix 1 or equivalent declaration completed and signed.

- Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

O15 Residual monomers in synthetic polymers

For each synthetic polymer in the cosmetic product, the quantity of residual monomers in newly produced polymers and its classifications must be stated. The polymer raw material may not contain more than 100 ppm residual monomer in of each classification listed in the table below.

Table 2 Classification of monomers

Hazard class	Hazard class and category	Hazard code
Carcinogenicity*	Carc. 1A or 1B	H350
	Carc. 2	H351
Germ cell mutagenicity*	Muta. 1A or 1B	H340
	Muta. 2	H341
Reproductive toxicity*	Repr. 1A or 1B	H360
	Repr. 2	H361
	Lact.	H362
Respiratory or skin sensitisation	Resp. Sens. 1, 1A or 1B	H334
	Skin Sens. 1, 1A or 1B	H317
Specific target organ toxicity	STOT SE 1	H370
	STOT SE 2	H371
	STOT RE 1	H372
	STOT RE 2	H373
Acute toxicity	Acute Tox. (oral) 1 or 2	H300
	Acute Tox. (oral) 3	H301
	Acute Tox. (dermal) 1 or 2	H310
	Acute Tox. (dermal) 3	H311
	Acute Tox. (inhalation) 1 or 2	H330
	Acute Tox. (inhalation) 3	H331
Endocrine disruption for human health**	ED HH 1	EUH380
	ED HH 2	EUH381

* Including all combinations of stated exposure routes and stated specific effect. For example, H350 also covers classification H350i.

** Other potential or identified endocrine disruptors, as defined in requirement O7. Excluded substances are also restricted according to this requirement.

- Appendix 1 or equivalent declaration completed and signed.

- Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

O16 Aluminium

In the cosmetics product, aluminium (corresponding to % elemental Al) may be present at the maximum concentration limits stated for each product type in the table below.

If a product type is not included in the table, the following maximum limit applies: 17.5%.

Table 3 Maximum concentration limits of aluminium in specific product categories.

Product category	Concentration (%) limits aluminium
After Shave	2.5
Bar Soap	4
Body Lotion	3.81
Body Spray	1.18
Deo Gel	6.18
Deo RollOn	5.63
Deo Stick	7.73
Deo Wipes	0
Deo Spray	4.88
Deo Spray (anti-perspirant)	3.24
Eau de Parfume, Eau de Toilette	0.05
Eye Shadow	43.62
Eyeliner	15.76
Face Moisturizer	10.59
Hair Spray	0.15
Hair Styling	6.7
Hand Cream	0.86
Lip Care Products	0.606
Lip Stick	14.62
Liquid Hand Soap	0.89
Liquid Make Up Foundation	23
Make Up Remover	10.59
Mascara	3.13
Mouthwash	0
Conditioner	7.14
Shampoo	7.14
Shaving Products	0.094
Shower Gel	0.89
Sunscreen Lotion	8.403
Sunscreen Spray	0.332
Talc	2
Toothpaste	3.18

This requirement will be removed from 1st of July 2028, when the transition periods in Regulation (EU) 2026/909 expire and aluminium is regulated under EU legislation.

- ☞ Formulation and calculation of aluminium content corresponding to elemental Al.
- ☞ Appendix 1 or equivalent declaration completed and signed.
- ☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

1.4 Biodegradability and aquatic toxicity

O17 Environmentally hazardous substances (C_{total})

Ingoing substances classified as environmentally hazardous according to Regulation 1272/2008/EEC (C_{total}) in the cosmetic product must not exceed the limits indicated in the table below, when calculated as the total weighted quantity:

$$C_{total} = 100 \times C_{H410} + 10 \times C_{H411} + C_{H412}$$

C_{H41X} is the fraction of the product, measured in percentage by weight, made up of the H410, H411 or H412 classified substances.

Ingoing substances must not be classified with the hazard code H410 if the associated multiplying factor M (as described in the CLP Regulation (EC) No 1272/2008) > 1 according to requirement O5 Classification of ingoing substances.

For concentrated products, which must be mixed with water by the consumer before use, the calculation is carried out on the use solution.

Table 4 Limit values for total weighted quantity of environmental hazards

Type of product	C_{total} (wt. %)
Soap rinse-off products (soap, shower gel, shampoo etc.)	14.0
Other rinse-off products	8.0
Leave-on products	4.0

☞ Calculation of the weighted quantity (percentage by weight) of H410, H411, and H412 classified substances. If data is missing on a substance, it is assessed according to a worst-case scenario (H410). Nordic Ecolabelling's calculation sheet for cosmetic products can be used.

☞ Appendix 1 or equivalent declaration completed and signed.

☞ Appendix 2 or equivalent declaration completed and signed by all raw material manufacturers/suppliers.

Rinse-off products

O18 aNBO (aerobic non-biodegradable organics) and anNBO (anaerobic non-biodegradable organics)

Ingoing substances in the cosmetic product must not exceed the limits indicated in the table below. For foam soap it is permitted to choose between applying the limits per active content or per dose. The unit used shall be the same as in O19 CDV.

Surfactants must be readily aerobic biodegradable and anaerobic biodegradable, see requirement O7 Surfactants.

Exemption to the definition of ingoing substances and impurities: Impurities in raw material ≤ 1.0 w% will not be included in calculations.

For concentrated products, which must be mixed with water by the consumer before use, the calculation is carried out on the use solution.

Table 5 Limit values for aNBO and anNBO

Type of product	aNBO (mg/g AC*)	anNBO (mg/g AC*)
Solid hand soap, shampoo bar, conditioner bar, shower bar.	5	5
Other rinse-off products	14	14

Type of product	aNBO (mg/dose**)	anNBO (mg/dose**)
Foam soap	2.5	2.5

* *Active content (AC) refers to the amount (weight) of all organic substances in the product excluding the water content of the ingredients. Abrasives in handwash and exfoliants are not included. However, see requirement O6 on Microplastics.*

** *One dose = the quantity dispensed per full depression by the dispenser or pump supplied with/ designed for the product. If the product is not sold with a particular dispenser, a standardised dose of 0.75 g is used.*

☰ Calculation of the quantity (mg) of aNBO and anNBO/g AC or mg/dose for the product. Nordic Ecolabelling's calculation sheet for cosmetic products can be used.

Reference to the DID-list 2023 or later versions. For substances not on the DID-list, or substances where biodegradation data is missing on the DID-list, the parameters must be calculated based on the guidance in part B of the DID-list and associated documentation must be presented.*

* *DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a more detailed description of the DID-list, and requirements for analysis laboratory and test methods.*

O19 Critical dilution volume (CDV)

The Nordic Swan cosmetic product's critical dilution volume (CDV) must not exceed the threshold values in the table below. CDV is calculated according to the formula:

$$CDV_{\text{chronic}} = \Sigma(DF_i \times C_i / TF_i (\text{chronic}))$$

DF_i is the degradation factor for substance i.

C_i is the amount in l of substance i per g active content or per dose

TF_i is the toxicity factor for substance i.

For foam soap it is permitted to choose between applying the limits per active content or per dose. The unit used shall be the same as in O18 aNBO and anNBO.

For concentrated products, which must be mixed with water by the consumer before use, the calculation is carried out on the use solution.

Exemptions to the definition of ingoing substances and impurities: Impurities in raw material ≤ 1.0 w% will not be included in calculations.

Table 6 Limit values for CDV

Type of product	CDV _{chronic} (l/g AC*)
Solid hand soap, shampoo bar, conditioner bar, shower bar.	2000
Liquid conditioner, hair mask, and other conditioning products	10000
Other rinse-off products	7000

Type of product	CDV _{chronic} (l/dose**)
Foam soap	1000

* *Active content (AC) refers to the amount (weight) of all organic substances in the product excluding the water content of the ingredients. Abrasives in handwash and exfoliants are not included. However, see requirement O6 on Microplastics.*

** *One dose = the quantity dispensed per full depression by the dispenser or pump supplied with/ designed for the product. If the product is not sold with a particular dispenser, a standardised dose of 0.75 g is used.*

☞ Calculation of the CDV_{chronic} l/g AC or l/dose for the product. Nordic Ecolabelling's calculation sheet for cosmetic products can be used.

Reference to the DID-list 2023 or later versions. For substances not on the DID-list or for which data is missing on DID-list, the parameters must be calculated based on the guidance in part B of the DID-list and associated documentation must be presented*. If chronic values are available, they must be used instead of acute ones.

* *DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a more detailed description of the DID-list, and requirements for analysis laboratory and test methods.*

Leave-on products

O20 Biodegradability and aquatic toxicity

At least 96% by weight of the total content of organic ingoing substances in the cosmetic product must be:

- Readily biodegradable (OECD 301 A-F), and/or
- Lowest aquatic toxicity NOEC/EC_x > 0.1 mg/l or EC/LC50 > 10.0 mg/l and not be bioaccumulative (log K_{ow} < 4 or BCF < 500), and/or
- Lowest aquatic toxicity NOEC/EC_x > 0.1 mg/l or EC/LC50 > 10.0 mg/l and be potentially biodegradable (OECD 302 A-C) and/or
- Lowest aquatic toxicity NOEC/EC_x > 0.1 mg/l or EC/LC50 > 10.0 mg/l and not be bioavailable (molar weight > 700g/mol).

Exemptions to the definition of ingoing substances and impurities: Impurities in raw material ≤ 1.0 w% will not be included in calculations.

UV filters and cera alba (beeswax), CAS No. 8012-89-3 are exempted.

Surfactants must be readily aerobic biodegradable and anaerobic biodegradable, see requirement O8 Surfactants.

Please note that the requirement does not apply to products containing 100% inorganic raw materials.

☞ Calculation of the quantity (percentage by weight) of substances that fulfil the listed requirements. Nordic Ecolabelling's calculation sheet for cosmetic products can be used.

Reference to the DID-list 2023 or later versions. For substances not on the DID-list or for substances where biodegradation data is missing, the parameters must be calculated based on the guidance in part B of the DID-list and associated documentation must be presented*. If chronic values are available, they must be used instead of acute ones.

* *DID-list: "Detergents Ingredients Database" list, see Appendix 7 for a more detailed description of the DID-list, and requirements for analysis laboratory and test methods.*

1.5 Specific additional requirements relating to certain product types

Lip products, toothpaste, oral hygiene products, and nipple cream

O21 Flavourings, colours, preservatives, and mineral oil

Ingoing substances in lip product, toothpaste, oral hygiene product, and nipple cream must comply with the following requirements:

- Flavourings must be approved for use in foodstuff under Regulation (EC) No 1334/2008.
- Colours and preservatives must be approved for use in foodstuff under Regulation 1333/2008.
- Mineral oil saturated hydrocarbons (MOSH, CAS No. 64742-65-0) and mineral oil aromatic hydrocarbons (MOAH, CAS No. 64742-82-1) in lip care products must comply with the recommendations by Cosmetic Europe for mineral oils: <https://cosmeticseurope.eu/download/N08vNnB0TUhMbWpwQmlqVk9UZzdwZz09>

🏠 Appendix 1 or equivalent declaration completed and signed.

🏠 Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

🏠 Specification of E-number. For flavourings confirmation that flavouring substances meet the requirements in EU Regulation 1334/2008 and, specification of FL-number for the flavouring substances for which it is required by this Regulation. Appendix 2 can be used.

O22 Fluoride/hydroxyapatite and zinc salts in toothpaste and mouthwash

Ingoing substances in toothpaste and mouthwash must comply with the following requirements:

- Toothpaste and mouthwash products must contain fluoride or hydroxyapatite in concentrations that comply with national recommendations.
- Water-soluble Zinc salts in mouthwash is only allowed up to 0,1%.

🏠 Formulation.

🏠 Appendix 1 or equivalent declaration completed and signed.

Decorative cosmetics and hair dyes

O23 Heavy metals in colourants

Traces of the following heavy metals cannot exceed the following limits in decorative cosmetic product or hair dye product:

- Arsenic 1 ppm
- Antimony 1 ppm
- Cadmium 1 ppm
- Chromium 10 ppm
- Cobalt 1 ppm

- Lead 1 ppm
- Mercury 1 ppm
- Nickel 10 ppm

Colours that are approved for use in food in Regulation 1333/2008 may be used without further documentation of the metals listed above.

In addition, the following requirement applies to decorative cosmetics:

- Bismuth Oxochloride (CAS No. 7787-59-9) is prohibited.

- ☞ Analysis results and/or material specification of the colourant.
- ☞ Appendix 2 or equivalent declaration completed and signed with calculations of the amount of the specific metals in the cosmetic product.
- ☞ Alternatively, test report showing that the quantities in the cosmetic product meet the requirement.
- ☞ Specification of E-number for colorants approved for food. Appendix 2 can be used.

O24 Hair dyes

The following hair dyes are prohibited in hair dye product:

- Lawsone (CAS No. 83-72-7)
- Hydroxypropyl p-phenylenediamine and its dihydrochloride salt (CAS No. 928659-47-5 and CAS No. 73793-79-0)
- Hair dyes judged to be sensitising and/or allergenic by the SCCS is prohibited even if they do not meet the classification of H317 and/or H334

- ☞ Appendix 1 or equivalent declaration completed and signed.
- ☞ Appendix 2 or equivalent declaration completed and signed by all relevant raw material manufacturers/suppliers.

Wet Wipes

O25 Wipe material

Wipe carrier material used in wet wipes must comply with the following requirements:

- Must not be based on fossil raw materials and must be plastic free. Chemically modified natural polymers, and biodegradable/bio-based plastics are also considered plastic, as specified in the guidelines on the Single-Use Plastic directive³.
- Wipe carrier material or fibre type must meet relevant requirements under one (not all) of the criteria documents listed in the table below.

³ Commission guidelines on single-use plastic products in accordance with Directive (EU) 2019/904 of the European Parliament and of the Council on the reduction of the impact of certain plastic products on the environment (2021/C 216/01)

Table 7 Requirements for wipe carrier material.

Wipe carrier material	Nordic Swan Ecolabel, Protective and absorbent hygiene products 023 version 7 or later	EU Ecolabel, Absorbent hygiene products 2023/1809/EU	Nordic Swan Ecolabel, Textiles version 5.4 or later	Nordic Swan Ecolabel, Tissue paper version 6.0 or later	EU Ecolabel Tissue paper 2019/70/EU
Regenerated cellulose*	The material must fulfill requirements: O2 section 3 O17-O18 O26-O27 O35-O36	The material must fulfill requirements: Criterion 2 and 7	Fibres must be licenced or fulfil requirements: O23-O27 O30-O31 O33-O41	**	**
Cellulose-based pulp/fluff pulp	The material must fulfill requirements: O2 section 3 O17-O18 O19-O20 O35-O36	The material must fulfill requirements: Criterion 1 and 7	**	**	**
Cotton and other natural cellulosic fibres	The material must fulfill requirements: O2 section 3 O23-O25 O35-O36	The material must fulfill requirements: Criterion 3 and 7	Fibres must be licenced or fulfil requirements: O14 O30-O31 O33-O41	**	**
Flax, bamboo, hemp and bast fibres	**	**	Fibres must be licenced or fulfil requirements O16-O17 O30-O31 O33-O41	**	**
Tissue paper made of cellulose-based pulp	**	**	**	Paper must be licenced	Paper must be licenced

* *Regenerated cellulose fibres, also known as man-made cellulose fibres, means fibres produced from the raw material cellulose which include viscose, modal, lyocell, cupro and triacetate.*

** *The criteria document is not applicable to the material type, select another of the alternative criteria documents.*

☞ If wipe carrier material or fibre type is licenced or used in a licenced product, valid licence number must be stated.

☞ Documentation for the relevant requirements in the chosen criteria document must be provided. For an overview of documentation required for each criteria document, please see appendix 8.

O26 Process water

Sensitising substances with H317 and/or H334 can be used in the process water of the wet wipe material production only if the concentration in the carrier material/wipe is < 0.10 ppm per sensitising substance.

☞ Signed declaration of the use of sensitising substances in the process water for material in wet wipes. Appendix 3 can be used.

☞ If sensitising substances are used, an analysis report is to be enclosed showing < 0.10 ppm for each sensitising substance.

O27 User information

Wet wipes must be marked on the packaging with the following information:

- “Do not flush” pictogram defined in guidelines for the EU Single-Use Plastic (SUP) Directive or corresponding pictogram

Product label.

Sunscreen products

O28 Efficacy and UV protection claims

The efficacy of sunscreen product's protection against UVB and UVA radiation must comply with the EU Commission Recommendation (2006/647/EC), Section 3 Minimum efficacy:

- UVB protection of minimum SPF 6
- UVA protection factor of minimum 1/3 of UVB SPF
- Critical wavelength of minimum 370 nm

Test methods

The test methods used to verify the efficacy shall be among those established by the European Committee for Standardization (CEN). The methods currently include:

- EN ISO 24444:2020 "Cosmetics - Sun protection test methods - In vivo determination of the sun protection factor (SPF) (ISO 24444:2019)"
- EN ISO 24443:2021 "Cosmetics - Determination of sunscreen UVA photoprotection in vitro (ISO 24443:2021, Corrected version 2022-02)"
- EN ISO 24442:2022 "Cosmetics - Sun protection test methods - In vivo determination of sunscreen UVA protection (ISO 24442:2022)"
- EN ISO 23675:2024 "Cosmetics - Sun protection test Methods - In Vitro determination of Sun Protection Factor"
- EN ISO 23698:2024 "Cosmetics - Measurement of the sunscreen efficacy by diffuse reflectance spectroscopy"

Labelling

The labelling of the sunscreen product must comply with Section 4 Simple and meaningful claims of efficacy:

- Claims indicating the efficacy shall be simple, unambiguous, meaningful, and coherent with the results from the above-mentioned efficacy testing of the product.
- Claims on the protection efficacy shall be indicated by categories “low”, “medium”, “high”, “very high”, according to the SPF intervals tabled in the Commission Recommendation.
- The claimed SPF shall be one of the “labelled sun protection factor” tabled in the Commission Recommendation, in accordance with the results of the efficacy testing.

- The protection efficacy category shall be indicated at least as prominently as the SPF.
- ☞ Test reports including description of the tests methods used and the results obtained.
- ☞ Product label.

Products outside the scope of the cosmetic products regulation

O29 Animal care products

Animal care product must comply with the following requirements:

- Fragrance and colourants are prohibited
 - The product shall comply with the following parts of the EU regulation on cosmetic products ((EC) No 1223/2009):
 - Article 14 Restrictions for substances listed in the Annexes
 - Article 15 Substances classified as CMR substances
 - Article 19 Labelling
 - Article 20 Product claims
 - The product must not be classified as hazardous to the aquatic environment corresponding to any of the codes H400, H410, H411, H412 or H413, according to the EU CLP regulation ((EC) No 1272/2008).
- ☞ Safety data sheet (SDS) of the product in accordance with the EU REACH regulation ((EC) No 1907/2006, Annex II).
- ☞ Appendix 1 or equivalent declaration completed and signed.
- ☞ Product label.

O30 Sex lubricants

Sex lubricant product must comply with the following requirements:

- Fragrance and colourants are prohibited
- The product shall comply with the following parts of the EU regulation on cosmetic products ((EC) No. 1223/2009):
 - Article 3 Safety
 - Article 8 Good manufacturing practise
 - Article 10 Safety assessment
 - Article 14 Restrictions for substances listed in the Annexes
 - Article 15 Substances classified as CMR substances
 - Article 19 Labelling
 - Article 20 Product claims
- The safety assessment must be conducted by a specialist with documented qualifications required for cosmetic product safety assessment. Additionally, in case the product manufacturer doesn't manufacture cosmetic products, the safety assessor must be an independent third party.
- The product must not be classified as hazardous to the aquatic environment corresponding to any of the codes H400, H410, H411, H412 or H413, according to the EU CLP regulation ((EC) No 1272/2008).

In cases where the product is within the scope of the EU regulation on medical devices (MDR, (EU) 2107/745)), compliance with it must be shown. The product then doesn't need to comply with articles 3, 8, and 10 of the cosmetic products regulation.

- ☞ Safety data sheet (SDS) of the product in accordance with the EU REACH regulation ((EC) No 1907/2006, Annex II) (not for products within the scope of the Cosmetics Regulation (EC) No 123/2009 or the Medical Devices Regulation (EU) 2107/745).
- ☞ Safety assessment report and declaration of the qualifications of the safety assessor (not for products within the scope of the MDR).
- ☞ EU declaration of conformity with the MDR (only for products within the scope of the MDR).
- ☞ Appendix 1 or equivalent declaration completed and signed.
- ☞ Product label (with CE conformity mark if the product is within the scope of the MDR).

O31 Medical examination lubricants

Medical lubricant product must comply with the following requirements:

- Fragrance and colourants are prohibited
- The product shall be within the scope of, and compliant with, the EU regulation on medical devices (MDR, (EU) 2017/745)
- The product shall comply with the following parts of the EU regulation on cosmetic products (CPR, (EC) No 1223/2009) (where the CPR is stricter than the MDR, the former applies):
 - Article 14 Restrictions for substances listed in the Annexes
 - Article 15 Substances classified as CMR substances
 - Article 19 Labelling
 - Article 20 Product claims

- ☞ EU declaration of conformity from the notified body, in accordance with the MDR.
- ☞ Appendix 1 or equivalent declaration completed and signed.
- ☞ Product label, with CE conformity mark.

1.6 Packaging requirements

Packaging and recycling of packaging materials is a focus area in society today. Nordic Ecolabelling wants to set strict requirements on packaging to reduce the material consumption and transport of packaging and air, and to ensure good possibilities for recycling, in order to support material recovery and circular economy.

The packaging requirements target the primary packaging and its recyclability. Only the packaging materials described in requirement O32 Packaging and materials can currently be used. If you are interested in another packaging type (or e.g., another label type), please contact Nordic Ecolabelling to find out whether the criteria can be extended to include your format.

The recyclability of primary packaging made from plastic can be documented with a Recyclability certificate from RecyClass showing that the primary packaging is fully

recyclable with a minimum recyclability score of B. See requirements O33 and O36 for further information.

Concentrated products (refills)

For concentrated products sold as refills, which are to be mixed with water by the user to form the finished product, both the main packaging and the refill packaging must meet the packaging requirements.

If the concentrated product is not sold with a refill packaging, but the label or other communication refers to a specific packaging that should be used for dilution, then this packaging must meet the packaging requirements.

If the packaging format, in which the product is to be diluted, is not specified then the packaging requirements only apply to the main packaging of the concentrated product.

Packaging \geq 200 l

Products supplied in packaging of \geq 200 l that is part of a take-back system* are exempt from requirements O32-O37.

O32 Packaging and materials

The following material types may be used in primary packaging*:

- Plastic (see requirement O33)
- Paper-based, e.g. cardboard and corrugated board and cardboard packaging for liquid products (see requirements O34 and O35 respectively)
- Glass containing \geq 50% recycled material*

Glass in pipette/droppers and small glass parts in packaging components are not required to be made of recycled material

- Aluminium, if the container does not contain layers or parts of other types of metals than aluminium, is based on $>$ 99.5% pure aluminium and contains \geq 60% recycled* aluminium:

The following packaging and material types must not be used:

- Miniature liquid products (\leq 100 ml) sold to the HoReCa sector*.
- Metal

Exemptions for:

- Aluminium packaging, as specified above
- Small metal parts in dispensing systems* (small parts of aluminium are not required to be made of recycled material).
- Sealing foil across small openings on e.g. tubes, are permitted up to 1% of the total weight of the packaging
- Decorative cosmetics up to 15% of the total weight of the packaging. Mirrors are not permitted as part of the packaging

Exemption: Packaging sizes \geq 200 l that is part of a take-back system* are exempted from this requirement.

* See list of definitions in section 1.2 of the document.

A comprehensive overview of all primary packaging components and specification of materials of all components (bottle, cap, pump, lid, etc.). Appendix 4 Declaration

from the manufacturer/supplier(s) of the primary packaging component can be used as part of the documentation.

- ☞ Declaration from the applicant that products with a volume lower than 100 ml is not sold to the HoReCa sector. Appendix 1 can be used.
- ☞ If primary packaging of aluminium: Declaration that no other metals or alloys are used. Appendix 4 can be used.
- ☞ If decorative cosmetic: Account of the content of metal in packaging for decorative cosmetics. Appendix 4 can be used.
- ☞ For packaging ≥ 200 l: Documentation showing that the packaging is part of a take-back system.

O33 Plastic packaging: Design for recycling

The primary packaging must have a design that enables material recovery. For label requirements, see O36. All other components must either comply with the requirements below or the primary packaging* must have a Recyclability certificate from RecyClass showing that the primary packaging is fully recyclable with a minimum recyclability score of B.

Separability

All components* of the packaging of products for domestic use** that are comprised of different materials must be possible to be sorted separately without using a tool (including sorting into different plastic types). Mixed materials that cannot be separated must not be used.

Containers with a thread neck are considered separable and no further documentation is required.

Exemptions:

- Sealing foil made of plastic across openings on e.g. tubes and jars
- Small ingoing parts in dispensing systems* (the dispensing system as a whole has to be separable from the container)
- Pressurised containers
- Airless containers
- Roll-on
- Dosing chamber and tube in PE or PP (with density $< 1 \text{ g/cm}^3$) on PET bottles
- Packaging for decorative cosmetic products

* See list of definitions in section 1.2 of the document.

** Please note that professional products are not considered for domestic use, and are thus exempted from the requirement on separability.

Material composition

The polymer composition of the individual components of the plastic packaging must be made from either:

Rigid plastic

- $\geq 99\%$ polyethylene (PE) with a density $< 0.97 \text{ g/cm}^3$. The remaining material must not be biodegradable or of any other material than PE or PP,
- or

- $\geq 95\%$ polypropylene (PP) with a density $< 0.97 \text{ g/cm}^3$.
The remaining material must not be biodegradable or of any other material than PE or PP,
or
- $\geq 98\%$ polyethylene terephthalate (PET).

Flexible pouches/films

- $\geq 95\%$ polyethylene (PE) with a density $< 1.00 \text{ g/cm}^3$.
or
- $\geq 95\%$ polypropylene (PP) with a density $< 1.00 \text{ g/cm}^3$.
or
- $\geq 98\%$ polyethylene terephthalate (PET).
- The remaining material must not be biodegradable.

Exemptions:

- The following are exempted from the requirement on material composition, however they must not contain PVC and other halogenated plastics:
 - Small parts in dispensing systems* for products sold to the consumer market*
 - Dispensing systems* for products sold to the professional market*
 - Pipettes/droppers
- Pouches sold to the professional market are exempted from the requirement on material composition until June 30th 2028.
- Sealing foil across openings on e.g. tubes and jars can be made of plastic laminate.
- Closures used on refill deodorants, or similar liquid products that is refilled from the bottom, may include membrane composed of nitril rubber (NBR) with a density $< 0.95 \text{ g/cm}^3$ for containers of PET and with a density $> 1.0 \text{ g/cm}^3$ for containers of PE and PP.
- Closures used on squeezeable upside down bottles may include a membrane composed of floating silicone with a density $< 0.95 \text{ g/cm}^3$ for containers of PET and with a density $> 1.0 \text{ g/cm}^3$ for containers of PE and PP. Any silicone used with this exemption must contain less than 1000 ppm of D4, D5, and D6. To qualify for this exemption, the primary packaging* must obtain a Recyclability certificate from RecyClass with a minimum recyclability score of B.

* See list of definitions in section 1.2 of the document.

Barriers

For packaging components of PE, PP or PET: Only EVOH and SiOx with a compatible binder matching the components material (PE, PP or PET), are allowed. If the binder does not match that of the component, the respective material impurity limits apply ($\geq 99\%$ PE, $\geq 95\%$ PP and $\geq 98\%$ PET).

Colours

- For packaging components of PE/PP: Colours without carbon black pigments are allowed.
- For packaging components of PET: Only transparent or translucent colours without carbon black pigment are allowed.

Exemption:

- Opaque colours may be used for oil-based products containing unsaturated and/or polyunsaturated fatty acids.

Surface treatment with PFAS

The primary packaging must not be surface treated with PFAS, either on the inside or on the outside of the packaging.

Exemption: Packaging sizes ≥ 200 l that is part of a take-back system* are exempted from this requirement.

- ☞ A picture/description of how the packaging's components of different materials can be separated without using tools. Alternatively, if the packaging has a threadneck this can be documented in Appendix 4.
- ☞ Packaging specifications or certificate for each component, showing the materials used, density of PE or PP components, any barriers used and which pigments have been added. Appendix 4 filled out by the manufacturer/supplier can be used or a Recyclability certificate from RecyClass showing that the primary packaging is fully recyclable with a minimum recyclability score of B.
- ☞ Closure on squeezeable upside down bottle with membrane of silicone:
 - Documentation showing that the density of the silicone is less than 0.95 g/cm^3 for containers of PET or more than 1.0 g/cm^3 for containers of PE or PP, and that the total content of D4, D5 and D6 is less than 1000 ppm. Appendix 4 can be used.
 - Recyclability certificate from RecyClass showing that the primary packaging is fully recyclable with a minimum recyclability score of B.
- ☞ Closures on refill deodorants, or similar products with membrane of NBR:
 - Documentation showing that the density of the nitril rubber (NBR) is less than 0.95 g/cm^3 for containers of PET or more than 1.0 g/cm^3 for containers of PE or PP. Appendix 4 can be used.
- ☞ Declaration that the packaging has not been treated with PFAS. Appendix 4 can be used.
- ☞ For packaging ≥ 200 l: Documentation showing that the packaging is part of a take-back system.

O34 Paper-based packaging: Recycled material and design for recycling

To enable recycling of the cardboard and corrugated board packaging, the following is required:

- Cardboard packaging must contain at least 90% paper/paperboard.
- A minimum of 75% by weight of the wood raw material that is used in the paper/cardboard must be made of recycled material*.
- The remaining proportion of wood raw material (that is not recycled material) must be covered by the FSC/PEFC** control schemes (FSC controlled wood/PEFC controlled sources).
- Two-sided plastic laminate is not permitted.
- PVC or plastic based on other types of halogenated plastics must not be used in the packaging (container and closure).

- Solid coloured cardboard is not permitted, except for white solid coloured cardboard, which is permitted.

* See list of definitions in section 1.2 of the document.

** (Forest Stewardship Council/ Programme for the Endorsement of Forest Certification).

☞ Description of the packaging from the packaging producer showing the following. Appendix 4 can be used:

- Percentage (by weight) of paper/paperboard material, and percentage of recycled material in wood raw material
- Percentage (by weight) of any barrier material; material type and description showing whether the barrier is one- or two-sided
- Percentage (by weight) of other materials that might be present in elements such as closure, handles etc. and material type.

☞ Declaration that any non-recycled wood raw material is covered by the FSC/PEFC control schemes.

☞ Declarations that two-sides laminate and PVC and other plastic based on other types of halogenated plastics has not been used. Appendix 4 can be used.

O35 Cardboard packaging for liquid products: Sustainable material and design for recycling

Beverage carton packaging that is Nordic Swan Ecolabelled according to the criteria for Nordic Ecolabelling for Packaging for Liquid Foods can be used without further documentation of requirement O35.

- Cardboard packaging for liquid products must contain at least 60% paper/paperboard.
- At least 90% by weight of the primary packaging must be made of bio-based material* or post-consumer/commercial recycled material (PCR)* or a combination of these. A mass balance approach is permitted.
- Paper/paperboard:
 - A minimum of 70% of the wood raw material that is used in the paper/cardboard must originate from forestry certified under the FSC or PEFC schemes, or the raw material can be recycled (PCR)*, or a combination of the two.
 - The remaining proportion of wood raw material must be covered by the FSC/PEFC control schemes (FSC controlled wood/PEFC controlled sources).
- For bio-based* plastic:
 - Palm oil and soy cannot be used as a raw material.
 - Sugar cane raw material must be certified according to a standard that meets Nordic Ecolabelling's requirements for raw material standards. This requirement does not apply for secondary raw materials*.
- PVC or plastic based on other types of halogenated plastics must not be used.
- Labels are not permitted.
- Direct printing on the cardboard in the packaging must only be done with water-based inks.

* See list of definitions in section 1.2 of the document.

- ☞ Description of the packaging from the packaging producer showing percentage (by weight) of paperboard material, barrier material (material type, whether it is bio-based or PCR and percentage) and other elements such as closure (material type, whether it is bio-based or PCR and percentage). Appendix 5 can be used.
- ☞ The producer of the packaging shall document, for instance based on invoice or delivery note, that the requirement of minimum 70% certified paper/paperboard is purchased on a yearly basis, and that the remaining proportion is covered by the FSC/PEFC control schemes.
- ☞ Calculation showing that the requirement for the proportion of bio-based or recycled material in the primary packaging is fulfilled. Appendix 5 can be used.
- ☞ Declaration that palm oil and soy has not been used. Appendix 5 can be used.
- ☞ For sugar cane: Copy of valid CoC certificate or certification number. The CoC certificate holder shall declare that all sugar cane used in the plastic for the cardboard packaging that is used for the cosmetic product is certified according to a specified standard. The standard must meet Nordic Ecolabelling's requirements for raw material standards. A mass balance approach is permitted.
- ☞ Declarations that PVC and other plastic based on other types of halogenated plastics has not been used. Appendix 5 can be used.
- ☞ Declarations that aluminium and other metals has not been used. Appendix 5 can be used.
- ☞ If direct printing is done on cardboard: Declaration that direct printing on cardboard in the packaging is done with water-based inks. Appendix 5 can be used.
- ☞ For packaging that is Nordic Swan Ecolabelled according to the criteria for Nordic Ecolabelling for Packaging for Liquid Foods: Please state the Nordic Swan Ecolabel licence number.

O36 Labels and print for all packaging materials: Design for recycling of packaging

To enable recycling of the packaging, labels* must either meet the requirements below. For plastic packaging, the primary packaging** can instead have a Recyclability certificate from RecyClass showing that the primary packaging is fully recyclable with a minimum recyclability score of B.

Label material

- Packaging made from polyethylene (PE) and polypropylene (PP):
 - The label must be of the same material as the packaging (PE/PP) and the polymer composition of the label material (excluding adhesive and print) must consist of either $\geq 99\%$ polyethylene (PE) or $\geq 95\%$ polypropylene (PP). The total density of the label must be $< 1 \text{ g/cm}^3$.
Exemption: Fold-out (cross-over) labels of PP are allowed on PE packaging.
- Packaging made from polyethylene terephthalate (PET):
 - The polymer composition of the label material (excluding adhesive and print) must consist of $\geq 99\%$ polyethylene (PE) or $\geq 95\%$ polypropylene (PP). The total density of the label must be $< 1.00 \text{ g/cm}^3$.

An exemption is made for oil-based products where labels of PET (not PET-G, cPET or foamed PET) are permitted.

- For packaging ≤ 500 ml: The label must not cover more than 50% of the packaging surface^{***}. Label coverage up to 70% can be accepted if an independent third party waste handling facility can demonstrate NIR-sorting according to ReCyclclass Sorting Evaluation Protocol^{****}, step 4.1-4.2 and 4.10-4.11 based on succes criteria described in step 4.13. The coverage percentage can be grouped and used for any smaller coverage percentage, if the composition of the bottle and label is:
 - The same material (e.g. PET bottle with PP label)
 - The same opacity/transparency (e.g. transparant PET bottle with white label)
- For packaging > 500 ml: The label must not cover more than 70% of the packaging's surface^{***}.
- Paper/cardboard packaging: The label must be of paper. It must also fulfill either:
 - The weight of the label must be < 5 w% of the total weight of the paper/cardboard packaging or
 - The label glue must be water soluble.
- Aluminium and glass: No requirement on labels

Print

- Printing inks for plastic packaging must be compliant with EuPIA exclusion policy^{*****}.
- Direct print on the container is not permitted except for date codes, batch codes and UFI (Unique Formula Identifier).

Exemption: Tubes, flexible plastic pouches, paper-based packaging and containers made from aluminium.

Exemption: Packaging sizes ≥ 200 l that is part of a take-back system* are exempted from this requirement.

* Label means "traditional label", shrink film label/sleeve etc.

** See list of definitions in section 1.2 of the document

*** Instructions and example calculations can be found in section 1 of appendix 6.

**** https://recyclclass.eu/wp-content/uploads/2024/01/SORTING-EVALUATION-PROTOCOL-FOR-PLASTIC-PACKAGING_-V2.0-FINAL.pdf

***** https://www.eupia.org/wp-content/uploads/2024/03/20240313-EuPIA_Exclusion_Policy_for_Printing_Inks_and_Related_Products_-March-2024_6th-Edition-v1-1.pdf

- 📄 For labels on plastic packaging: Label specifications showing the material used and density. Appendix 4 can be used or a Recyclability certificate from RecyClass showing that the plastic primary packaging is fully recyclable with a minimum recyclability score of B.
- 📄 For labels on PET packaging: Calculation of label size compared to the surface of the container. Nordic Ecolabelling's calculation sheet for the packaging can be used.
- 📄 In case of label coverage between 50% to 70% on ≤ 500 ml packaging: a statement from a third party waste handling facility demonstrating NIR-sorting according to

ReCyclclass Sorting Evaluation Protocol, step 4.1-4.2 and 4.10-4.11 based on success criteria described in step 4.13

- ☞ For labels on paper/cardboard packaging: Specification from the manufacturer showing that the label is made of paper and that the adhesive is water soluble. Appendix 4 can be used.
- ☞ Declaration from the applicant that direct print is not used except for date codes, batch codes and UFI. Appendix 1 can be used.
- ☞ For packaging ≥ 200 l: Documentation showing that the packaging is part of a take-back system.

O37 Amount of packaging: Weight-Utility Ratio (WUR)

To limit the use of an unnecessarily large amount of material, the primary packaging must meet the following calculation. More detailed information and calculation examples can be found in Appendix 6.

$$\frac{\sum(mf_i \cdot W_{material,i})}{t} \leq a \cdot Vol_{product} + b$$

mf_i = Material factor for type of material divided into the following three materials:

$$mf_{paper/cardboard} = 0.4$$

$$mf_{plastic} = 1.0$$

$$mf_{plastic\ laminate} = 1.0$$

$$mf_{aluminium} = 1.6$$

$$mf_{glass} = 0.6$$

$W_{material\ i}$ = Weight of the packaging component (including label) in grams

t = Reuse factor ($t=1$ for packaging, which is not reused for the same purpose, $t > 1$ if the product is sold with a refill or for the purpose of multiple refills, e.g. $t = 5$ if the amount of refills is 4.)

$Vol_{product}$ = Volume of the product in ml

a and b are constants that vary for different packaging types:

Packaging type	a	b
Regular pump bottle	0.05	28
Foam pump bottle	0.035	52
Airless packaging	0.36	19
Tube	0.1	7.5
Bottle	0.065	15
Jar	0.08	35
Stick + roll on	0.2	24
Wet wipes*	0.098	8
Propellant bottles	0.4	10
Solid soaps, shampoo etc.	0.025	0.4
Diverse	0.013	15

For decorative cosmetics** the following applies:

$$\frac{\sum W_{\text{packaging},i}}{W_{\text{product},\text{total}}} \leq 0.9$$

$W_{\text{packaging}, i}$ = the weight of the packaging component i

$W_{\text{product}, \text{total}}$ = the weight of the end product (packaging plus content)

For concentrated products sold as refills, both the main dispensing packaging and the refill packaging must be included in the WUR calculation. If the packaging format, in which the product is to be diluted, is not specified then the WUR requirements only apply to the main packaging of the concentrated product. For a definition of "main packaging" and "refill packaging", please see the list of definitions in section 1.2.

Exemption: Packaging sizes ≥ 200 l that is part of a take-back system* are exempted from this requirement.

* *Wet wipes use the same equation as above, but volume of the product is replaced by the number of wet wipes in the packaging.*

** *Decorative cosmetics are mascara, eye liner, eye primer, eyebrow pencil, eyeshadow, powder/blusher, foundation, concealer, primer, nail varnish, lipstick, lip gloss and similar products.*

- 🏠 Packaging specifications (including all components, such as container and closure (cap, spray nozzle etc), label etc.) or certificate showing the materials used, component weights. Appendix 4 can be used.
- 🏠 Calculation of weight-utility ratio (WUR). Nordic Ecolabelling's calculation sheet for the packaging can be used.
- 🏠 If $t > 1$: Documentation in the form of sales statistics or similar showing how many refills are sold per original packaging.
- 🏠 For packaging ≥ 200 l: Documentation showing that the packaging is part of a take-back system.

O38 Dosability/Dosing systems and emptying level

To avoid over-dosing, the following is required:

- For liquid hand soap, no pump or dispenser sold with the product may provide more than 2 g soap per full press
- The following products must have an emptying level* of 90% or be able to be taken apart without tools in order to be able to empty the packaging further:
 - Bottles for conditioner and cream
 - Bottles with a pump, incl. dispenser bottles and bag-in-box dispenser systems

Pump products with an "airless" system are exempted from this requirement.

* *Emptying level must be calculated according to the formula and taking into account the emptying methods in Appendix 6.*

- 🏠 For liquid hand soap: Description of dosing system and weighing results per full press or specification for the pump showing the amount in ml per full press.

- 🏠 For conditioner and cream bottles, bottles with a pump, incl. dispenser bottles, and bag-in-box products: Documentation of emptying level in accordance with Appendix 6 or a picture/description of how the lid/pump can be taken apart without tools.

1.7 Disposal information requirements

Correct disposal of cosmetic products is an important factor in reducing the environmental impact.

O39 Disposal information

- All cosmetic products must be marked with pictograms for recycling according to one of the following:
 - EUPicto (eupicto.com)
 - European standards (e.g. DIN 6120-2)
 - Recommendations from national recycling systems (such as Grønt Punkt)
- The product types mentioned in the table below must bear the texts stated or equivalent information/pictogram on the label:

Table 8 Consumer information on label

Product	Cleansing lotion	Eye make-up remover	Nail polish	Nail polish remover	Aerosol spray cans
"Do not discard cotton wool or paper carrying this product in the lavatory or drain. Dispose in a waste bin instead" Or "Cleanse with a reusable pad"	X	X			
"Do not discard cotton wool or paper carrying this product in the lavatory or drain. Dispose in a waste bin instead"				X	
"Do not discard product in the lavatory, drain or waste bin. Please leave at a collection point for hazardous waste instead"			X	X	
"Do not discard product in a waste bin. Please leave at a collection point for hazardous waste instead"					X

- 🏠 Product label.

1.8 Licence maintenance

The purpose of the licence maintenance is to ensure that fundamental quality assurance is dealt with appropriately.

O40 Customer complaints

The licensee must guarantee that the quality of the cosmetic product does not deteriorate during the validity period of the licence. Therefore, the licensee must keep an archive over customer complaints. Note that the original routine must be in one Nordic language or in English.

🏠 Routine for handling and archiving customer complaints.

O41 Traceability

The licensee must be able to trace the cosmetic product in the production. A manufactured / sold product should be able to trace back to the occasion (time and date) and the location (specific factory) and, in relevant cases, also which machine / production line where it was produced. In addition, it should be possible to connect the product with the actual raw material used.

You can upload your company's routine or a description of the actions to ensure traceability in your company.

🏠 Traceability routine or a procedure description.

Regulations for the Nordic Ecolabelling of products

When the Nordic Swan Ecolabel is used on products the licence number shall be included.

More information on graphical guidelines, regulations and fees can be found at www.nordic-swan-ecolabel.org/regulations

Follow-up inspections

Nordic Ecolabelling may decide to check whether the products fulfil Nordic Ecolabelling requirements during the licence period. This may involve a site visit, random sampling, or similar test.

The licence may be revoked if it is evident that the product does not meet the requirements.

Random samples may also be taken in-store and analysed by an independent laboratory. If the requirements are not met, Nordic Ecolabelling may charge the analysis costs to the licensee.

Criteria version history

Nordic Ecolabelling adopted version 4.0 of the criteria for cosmetic products 04 November 2024. The criteria are valid until 28 February 2030.

On 18 March 2025 Nordic Ecolabelling adopted an adjustment of requirement O33 Plastic packaging: Design for recycling by expanding the exemption for membranes of silicone in closures on PET containers to also include PE and PP containers.

The new version is called 4.1.

On 13 May 2025 Nordic Ecolabelling adopted an adjustment of requirement O27 User information (on wet wipes) by allowing corresponding pictograms to be used and removed the requirement that the pictogram must be placed on the front side of the packaging.

On 20 May 2025 Nordic Ecolabelling adopted an adjustment of requirement O6 Microplastics, where a complete exemption to the requirement is introduced for sunscreen products. The exemption is valid until the 29 October 2029.

On 27 May 2025 Nordic Ecolabelling adopted an adjustment of requirement O36 Labels and print for all packaging materials: Design for recycling of packaging, where an exemption is introduced allowing PET labels (not PET-G, cPET or foamed PET) on PET packaging for oil-based products. And an adjustment of requirement O37 Amount of packaging: Weight-Utility Ratio (WUR), where adjusted limit values for the packaging type Airless packaging is introduced.

The new version is called 4.2.

On 10 June 2025 Nordic Ecolabelling adopted an adjustment of requirement O33 Plastic packaging: Design for recycling by exempting sealing foil made of plastic from the requirements on separability and materials. And an adjustment of requirement O37 Amount of packaging: Weight-Utility Ratio (WUR), where the packaging type pump bottles is separated into two types with their own limit values: Regular pump bottle and foam pump bottle.

On 24 June 2025 Nordic Ecolabelling adopted an adjustment of requirement O33 Plastic packaging: Design for recycling by exempting nitril rubber (NBR) in closures for refill deodorants. In requirements O36 Labels and print for all packaging materials: Design for recycling of packaging, the requirement for printing inks to be non-bleeding is removed. Also, the limit values for Airless packaging was changed, due to an error in the values in version 4.2.

The new version is called 4.3.

On 12 August 2025 Nordic Ecolabelling adopted an adjustment of requirement O33 Plastic packaging: Design for recycling specifying that small parts in dispensing systems are exempted from the requirement on separability, however the dispensing system as a whole must be separable from the container. Small parts in dispensing systems are also exempted from the requirement on materials, but must not contain PVC or other halogenated plastics. Furthermore, requirement O37 Amount of packaging: Weight-Utility-Ratio (WUR) has been adjusted such that the limit value for the category stick and roll-on has been eased in order to accommodate for lip balm in two-pack, which makes it easier to handle the product in retail.

On 19 August 2025 Nordic Ecolabelling adopted an adjustment of requirement O33 Plastic packaging: Design for recycling specifying that packaging made from soft plastic (e.g. pouches) must contain $\geq 95\%$ polyethylene (PE) and pouches to the professional market are exempted from the requirement until June 30th 2028. Furthermore, in requirement O32 Packaging and materials the size restriction on aluminium packaging has been removed.

On 26 August 2025 Nordic Ecolabelling adopted an adjustment of requirement O20 Biodegradability and aquatic toxicity, where an exemption from the requirement is introduced for cera alba (beeswax).

The new version is called 4.4.

On 30 September 2025 Nordic Ecolabelling adopted an adjustment of requirement O32 specifying that pipettes/droppers may be made of virgin glass and are thus exempted from the requirement on a minimum content of recycled glass, and exempting pipettes/droppers from requirement O33 on monomaterial in plastic components. Furthermore, dispensing systems in products sold to the professional market are also exempted from the requirement on monomaterials in plastic components, but must not contain PVC or other halogenated plastics.

On 7 October 2025 Nordic Ecolabelling adopted an adjustment of requirement O6 by introducing an exemption for high-molecular-weight crosslinked acrylate-based polymers that function as rheology modifiers/thickeners (e.g. carbomers and acrylates/C10-30 alkyl Acrylate Crosspolymer) in leave-on products applies until 17. October 2029, provided that a detailed phase-out plan is prepared by the applicant.

On 14 October 2025 Nordic Ecolabelling adopted an adjustment of requirement O6 by making the exemption for titanium dioxide permanent for products that are not loose powder, in spray form, toothpaste, or lip products (lip balm, lipstick, lip gloss, lip liner, and similar).

On 28 October 2025 Nordic Ecolabelling adopted an adjustment of requirement O7 by allowing quaternary ammonium compounds that are not anaerobically biodegradable. Requirement O36 has been adjusted to allow label coverage up to 70% on PET packaging for containers ≤ 500 ml if an independent third party waste handling facility can demonstrate NIR-sorting according to ReCyclclass Sorting Evaluation Protocol. Furthermore, the material factor for aluminium in requirement O37 has been adjusted to 1.6.

Furthermore, the newly published criteria for Protective and Absorbent Hygiene Products 7.0 have been added as an alternative for showing fulfillment of requirement O25 Wipe material for wet wipes.

The new version is called 4.5.

On 11 November 2025 Nordic Ecolabelling adopted an adjustment of requirement O35 Cardboard packaging for liquid products: Sustainable material and design for recycling, specifying that only printing done on the cardboard of the packaging must be done with water-based inks.

The new version is called 4.6.

On 20 January 2026 Nordic Ecolabelling adopted an adjustment of requirement O11 by allowing up to 4000 ppm of menthol in toothpaste.

On 10 February 2026 Nordic Ecolabelling adopted an adjustment of requirement O32 concerning separability, by exempting packaging made from PET that contains parts of PE or PP that are not separable from the primary packaging. Furthermore, packaging ≥ 200 l is exempted from requirements O32-O37 if the packaging is part of a take-back system for refill of the packaging.

The new version is called 4.7.

On 21 April 2026 Nordic Ecolabelling adopted an adjustment of requirement O36 concerning paper labels on paper-based packaging, by exempting such paper labels from the requirement on using water-based glue if the label weighs less than 5% of the total weight of the paper-based packaging.

On 9 June 2026 Nordic Ecolabelling added a note to requirement O16 that it will be from 1 July 2028, when the transition periods in Regulation (EU) 2026/909 expire and aluminium is regulated under EU legislation.

The new version is called 4.8.

New criteria

In the next generation of the criteria, the following should be reviewed:

- The possibility for setting a requirement for the maximum allowed content of raw materials based on fossils.
- The possibility for requiring that palm oil/palm kernel oil must be RSPO certified with traceability level Segregated or Identity Preserved, and no longer allowing Mass Balance (or Book and Claim).
- The possibility for setting a requirement for the maximum allowed content of viscose in wet wipes.
- The possibility for setting a requirement for the minimum amount of recycled material in plastic packaging.

Appendix 1 Declaration from the manufacturer of the cosmetic product (v.2)

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Should such new knowledge arise, the undersigned is obliged to submit an updated declaration to Nordic Ecolabelling.

Product name:	
Product's function/type (e.g. shampoo, soap, lotion, wet wipes, toothpaste):	
Professional or consumer product	
Professional product <i>Products that are marketed for use in professional contexts such as healthcare, food industry, institutions and within the public sector. Products are considered for the professional market if more than 80% of sales are to professional users.</i>	
Consumer product <i>Products that are marketed towards retailers and/or consumers. Products are considered for consumer use if 20% or more of sales are to consumers</i>	
Product group (tick the box):	
Shampoo, conditioner, soap and toothpaste	
Sun protection	
Wet wipes	
Other cosmetics	
Non cosmetics care products	

Ingoing substances and impurities are defined below, unless stated otherwise in the requirements.

- **Ingoing substances:** All substances in the Nordic Swan Ecolabelled cosmetic product, including additives (e.g. preservatives and stabilisers) in the raw materials. Substances known to be released from ingoing substances (e.g. formaldehyde, arylamine, in situ-generated preservatives) are also regarded as ingoing substances.
- **Impurities:** Residuals, pollutants, contaminants etc. from production, incl. production of raw materials that remain in the Nordic Swan Ecolabelled cosmetic product in concentrations less than 100 ppm in the rinse-off product and less than 10 ppm in the leave-on product.

- Impurities in the raw materials exceeding concentrations of ≥ 1000 ppm are always regarded as ingoing substances, regardless of the concentration in the Nordic Swan Ecolabelled cosmetic product.

Examples of impurities are residues of the following: residues or reagents incl. residues of monomers, catalysts, by-products, scavengers, and detergents for production equipment and carry-over from other or previous production lines.

Foil that is not removed before use of the product, and that is water soluble is considered as part of the formulation.

O2: SCCS Opinions	YES	NO
Is the product a cosmetic product that does <i>not</i> comply with SCCS Opinions?		
O4: Palm oil/palm kernel oil	YES	NO
Does the product contain renewable raw materials from palm oil or palm kernel oil, that are not RSPO certified (Identity Preserved, Segregated or Mass Balance)? This includes by-products, residues, and waste fractions from palm oil industries, such as palm fatty acid distillate and palm effluent sludge.		
Is the manufacturer of the cosmetic product RSPO Supply chain certified? If yes , state the certificate/license number:		
O5: Does the product contain substances classified with any of the hazard codes below? Incl. all classification variants. For example, H350 also covers classification H350i.	YES	NO
Carc. 1A or 1B H350		
Carc. 2 H351		
Muta. 1A or 1B H340		
Muta. 2 H341		
Repr. 1A or 1B H360		
Repr 2 H361		
Lact. H362		
Resp. Sens. 1, 1A or 1B H334		
Skin Sens. 1, 1A or 1B H317		
Acute Tox. (oral) 1 or 2 H300		
Acute Chronic 1 H410, M>1		
ED HH 1 EUH380		
ED HH 2 EUH381		
ED ENV 1 EUH430		
ED ENV 2 EUH431		

PBT EUH440		
vPvB EUH441		
PMT EUH450		
vPvM EUH451		
06-07: Does the product contain any of the following excluded substances?	YES	NO
1,4-dioxane (CAS No. 123-91-1) <i>Applies to ingoing substances and impurities present at ≥ 10 ppm in the cosmetic rinse-off or leave-on product.</i>		
Alkylphenols (AP) e.g. butylated hydroxy anisole (BHA, CAS No. 25013-16-5), alkylphenol ethoxylates (APEO), and other alkylphenol derivates (APD)		
Bisphenols and bisphenol derivatives with the following EC/List No.: 201-245-8 (BPA), 201-025-1 (BPB), 401-720-1 (4,4'-Isobutylethylidenediphenol), 216-036-7 (BPAF) and its 8 salts (278-305-5; 425-060-9; 443-330-4; 468-740-0; 469-080-6; 479-100-5; 943-265-6; 947-368-7), 201-250-5 (BPS), 201-240-0 (BPC), 204-279-1 (TBMD), 201-618-5 (6,6'-di-tert-butyl-4,4'-butylidenedi-m-cresol), 242-895-2, 248-607-1, 405-520-5 (D8), 217-121-1 (DAB), 227-033-5 (TMBPA), 210-658-2 (BPF), 411-570-9, 277-962-5 (contains BPS, 500-086-4 (contains BPA), 500-263-6 (contains BPA), 500-607-5 (contains BPA), 701-362-9, 904-653-0 (contains BPA), 908-912-9 (contains BPF), 926-571-4 (contains BPA), 931-252-8 (contains BPA), 941-992-3 (contains BPS), 943-503-9 (contains BPA).		
Benzalkonium chloride (CAS No. 63449-41-2)		
Boric acid, borates, and perborates		
Ethylenediamine tetraacetate (EDTA, CAS No. 6381-92-6) and its salts and Diethylenetriamine pentaacetate (DTPA, CAS No. 67-43-6) and its salts		
Halogenated or aromatic solvents		
Microplastics: Synthetic polymer microparticles as defined in the Restriction List (entry 78) of the amended Annex XVII to the REACH Regulation (EC) No 1907/2006 The following "Conditions of restriction" paragraphs apply: 1 (concentration limit in mixtures), 2 (definitions), 3 (particle size limits). The remaining points do not apply, e.g. 4 (Paragraph 1 shall not apply to the placing on the market of:), e.g. 4(a) "synthetic polymer microparticles, as substances on their own or in mixtures, for use at industrial sites", 5 (derogations), e.g. 5 (b) "synthetic polymer microparticles the physical properties of which are permanently modified during intended end use in such a way that the polymer no longer falls within the scope of this entry". Applies to raw materials, ingoing substances and impurities present at $\geq 0,010\%$ in the cosmetic rinse-off or leave-on product.		
Nanomaterials/-particles, as defined in the cosmetic products regulation ((EC) No 1223/2009): Insoluble or biopersistent and intentionally manufactured materials with one or more external dimensions or an internal structure in the region of 1-100 nm.		
Nitro musks and polycyclic musk compounds		
Organic chlorine compounds, hypochlorous acid and hypochlorite		
Parabens (4-Hydroxybenzoic acid and its salts and esters)		
PBT and vPvB substances in accordance with REACH Annex XIII, including substances under investigation according to the ECHA PBT assessment list https://echa.europa.eu/pbt/-/dislist/details/0b0236e1889ab857		
Per- and polyfluorinated substances (PFAS) PFASs are defined as fluorinated substances containing at least one fully fluorinated methyl or methylene carbon atom (without any H / Cl / Br / I atom attached to it)		
Phthalates (esters of phthalic acid, CAS No. 88-99-3)		

Potential or identified endocrine disruptors, according to any of the following EU member state initiative "Endocrine Disruptor Lists": List I: https://edlists.org/the-ed-lists/list-i-substances-identified-as-endocrine-disruptors-by-the-eu List II: https://edlists.org/the-ed-lists/list-ii-substances-under-eu-investigation-endocrine-disruption List III: https://edlists.org/the-ed-lists/list-iii-substances-identified-as-endocrine-disruptors-by-participating-national-authorities		
Quaternary ammonium compounds, which are not readily aerobic biodegradable (such as DTDMAC (CAS No. 68783-78-8), DSDMAC (CAS No. 107-64-7), DHTDMAC (CAS No. 61789-80-8) and DADMAC (CAS No. 7398-69-8)).		
Salicylic acid (CAS No. 69-72-7) and its salts (CAS No. 824-35-1 / 18917-89-0 / 59866-70-5 / 54-21-7 / 578-36-9 / 2174-16-5), benzyl salicylate (CAS No. 118-58-1), and ethyl-hexyl salicylate (CAS No. 118-60-5)		
Siloxanes, that are cyclic		
Siloxanes, that are linear		
Silver, colloidal silver and nanosilver		
Substances on the REACH Candidate list of SVHC https://www.echa.europa.eu/candidate-list-table		
Titanium dioxide (TiO ₂ , CAS No. 13463-67-7)		
Triclosan (CAS No. 3380-34-5)		
O8: Surfactants	YES	NO
Does the product contain surfactants? Surfactants are defined as any organic substance, which has surface-active properties, and which consists of one or more hydrophilic and one or more hydrophobic groups of such a nature and size that it is capable of reducing the surface tension of water. Substances on the DID-list with number 2001-23xx are considered surfactants and substances with number 2401-26xx are not considered surfactants.		
Is the product a toothpaste that contains sodium lauryl sulphate (SLS)?		
O9-O11: Fragrances	YES	NO
Does the product contain fragrances that are <i>not</i> added in line with the IFRA guidelines?		
Is the product intended for babies/children and contain fragrances?		
Does the product contain fragrances that are H317/H334 classified or fragrance allergens listed in Annex III of the Cosmetics Regulation?		
Does the product contain the fragrance allergens oak moss extract (<i>Evernia prunastri</i> , CAS No. 90028-68-5) or tree moss extract (<i>Evernia furfuracea</i> , CAS 90028-67-4)?		
O12: Organic colorants	YES	NO
Does the product contain organic colourants? If yes , state log Kow/BCF or E-number:		
Does the product contain Carbon Black?		
O13: Preservatives	YES	NO
Does the product contain preservatives? If yes , state log KowW/BCF:		
Does the product contain preservatives that are not readily aerobic biodegradable?		

O14: UV filters	YES	NO
Does the product contain UV filters? If yes , state log KoW/BCF or lowest available NOEC/EC/LC50: If yes , are the UV filters added to protect the product?		
O15: Does the product contain synthetic polymers with one or more residual monomers of the following properties > 100 ppm: <i>Incl. all classification variants. For example, H350 also covers classification H350i.</i>	YES	NO
Carc. 1A or 1B H350		
Carc. 2 H351		
Muta. 1A or 1B H340		
Muta. 2 H341		
Repr. 1A or 1B H360		
Repr 2 H361		
Lact. H362		
Resp. Sens. 1, 1A or 1B H334		
Skin Sens. 1, 1A or 1B H317		
STOT SE 1 or 2 H370-H373		
Acute Tox. (oral) 1, 2 or 3 H300, H301		
Acute Tox. (dermal) 1, 2 or 3 H310, H311		
Acute Tox. (inhalation) 1, 2 or 3 H330, H331		
ED HH 1 or 2 EUH 380, EUH 381		
O16: Aluminium	YES	NO
Does the product contain aluminium? If yes , state the amount of aluminium corresponding to elemental %Al:		
O17: Environmentally hazardous substances	YES	NO
Does the product contain substances classified H410, H411 or H412?		

O21-O22: Oral products	YES	NO
<p>Is the product a lip product, toothpaste, oral hygiene product or nipple cream?</p> <p>If yes, state the E-number of colorants and preservatives:</p> <p>If flavouring: Does the flavouring substance meet the requirements in EU Regulation 1334/2008?</p> <p>If yes, state the FL-number of flavourings for which it is required by this regulation:</p> <p>FL-numbers are available at the European Commission's Food flavourings database https://ec.europa.eu/food/food-feed-portal/screen/food-flavourings/search and Annex I of Regulation (EC) No 1334/2008</p>		
<p>Is the product a lip product with mineral oil saturated hydrocarbons (MOSH) or mineral oil aromatic hydrocarbons (MOAH) that does not comply with the recommendations by Cosmetic Europe for mineral oils? https://cosmeticseurope.eu/download/N08vNnB0TUhMbWpwQmlqVk9UZzdWZz09</p>		
<p>Is the product a toothpaste or mouthwash?</p> <p>If yes, state the content of fluoride:</p>		
<p>Is the product a mouthwash that contains more than 0,1% water-soluble zinc salts?</p>		
O23-O24: Decorative cosmetics and hair dyes	YES	NO
<p>Is the product a decorative cosmetic or hair dye that contains more than the following amounts of heavy metals?</p> <ul style="list-style-type: none"> - Arsenic, antimony, cadmium, cobalt, lead, mercury: 1 ppm - Chromium, nickel: 10 ppm 		
<p>Is the product a hair dye that contains lawsone (CAS No. 83-72-7), hydroxypropyl p-phenylenediamine or its dihydrochloride salt (CAS No. 928659-47-5 and CAS No. 73793-79-0) or hair dyes judged to be sensitising and/or allergenic by the SCCS (even if they do not meet the classification of H317 and/or H334)?</p>		
O29-O31: Animal care products and lubricants	YES	NO
<p>Is the product an animal care product, sex lubricant, or medical lubricant that contains fragrance or colorants?</p>		
<p>Is the product an animal care product or sex lubricant that is classified H400, H411, H412 or H413?</p>		
<p>Is the product a sex lubricant or medical lubricant, which is covered by the Medical Devices Regulation ((EU) 2017/745)?</p>		
<p>Is the product an animal care product, sex lubricant, or medical lubricant that does <i>not</i> comply with the following parts of the EU regulation on cosmetic products:</p> <ul style="list-style-type: none"> - Article 3 Safety (only applies to sex lubricants) - Article 8 Good manufacturing practise (only applies to sex lubricants) - Article 10 Safety assessment (only applies to sex lubricants) - Article 14 Restrictions for substances listed in the Annexes - Article 15 Substances classified as CMR substances - Article 19 Labelling - Article 20 Product claims 		
O32: Packaging and materials	YES	NO
<p>Is the product a liquid product in miniature packaging (< 100 ml) and being sold to the HoReCa sector (hotels, restaurants, and catering)?</p>		
<p>Does the packaging contain metal seals or other metal parts?</p>		
O33: Plastic packaging: Design for recycling	YES	NO
<p>Does the primary packaging* have a RecyClass certificate showing that the primary packaging is fully recyclable with a minimum recyclability score of B?</p>		

* In accordance with EU Directive 94/62/EC on packaging and packaging waste, the term "primary packaging" is defined as consumer packaging, i.e., packaging conceived to constitute a sales unit to the final user or consumer at the point of sale.		
If the closure contains a membrane of silicone: Is the bottle a squeezable upside down bottle? Is the density of the silicone membrane compatible with recycling of the closure (< 0.95 g/cm ³ for PET and > 1.0 g/cm ³ for PE and PP)?		
If the closure contains a membrane of nitril rubber (NBR): Is the product a refill deodorant, or similar liquid product that is refilled from the bottom? Is the density of the NBR membrane compatible with recycling of the closure (< 0.95 g/cm ³ for PET and > 1.0 g/cm ³ for PE and PP)?		
Is the packaging opaque PET? If yes , is the product a oil-based product containing unsaturated and/or polyunsaturated fatty acids?		
O36: Labels and direct print for all packaging materials	YES	NO
Does the primary packaging* have a RecyClass certificate showing that the primary packaging is fully recyclable with a minimum recyclability score of B? * In accordance with EU Directive 94/62/EC on packaging and packaging waste, the term "primary packaging" is defined as consumer packaging, i.e., packaging conceived to constitute a sales unit to the final user or consumer at the point of sale.		
For PET packaging: Is the label made of PET? If yes , is the product oil-based?		
For packaging other than tubes, flexible plastic pouches, paper-based packaging and aluminium containers: Is direct print on the packaging only used for date codes, batch codes and UFI?		
Are labels printed internal at the production site, or by an external printing company (other than the label supplier)? If yes , is the printing ink used for the plastic packaging compliant with EuPIA exclusion policy?		

If the answer to any of the above questions is yes, state the CAS No. (where possible), chemical name and level (in ppm, % by weight or mg/kg). Also, state whether the substance is contained in the form of an impurity or an ingoing substance.

--

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.

Appendix 2 Declaration from the manufacturer/ supplier of the raw material (v.2)

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Please inform Nordic Ecolabelling if new knowledge arises and submit an updated declaration.

For suppliers: If you do not have knowledge about the complete composition of the raw material/ingredient, you are obliged to obtain this information from the manufacturer.

Manufacturer/Supplier
Trade name of the raw material

Ingoing substances and impurities are defined below, unless stated otherwise in the requirements.

- Ingoing substances: All substances in the Nordic Swan Ecolabelled cosmetic product, including additives (e.g. preservatives and stabilisers) in the raw materials. Substances known to be released from ingoing substances (e.g. formaldehyde, arylamine, in situ-generated preservatives) are also regarded as ingoing substances.
- Impurities: Residuals, pollutants, contaminants etc. from production, incl. production of raw materials that remain in the Nordic Swan Ecolabelled cosmetic product in concentrations less than 100 ppm in the rinse-off product and less than 10 ppm in the leave-on product.
- Impurities in the raw materials exceeding concentrations of ≥ 1000 ppm are always regarded as ingoing substances, regardless of the concentration in the Nordic Swan Ecolabelled cosmetic product.

Examples of impurities are residues of the following: residues or reagents incl. residues of monomers, catalysts, by-products, scavengers, and detergents for production equipment and carry-over from other or previous production lines.

Foil that is not removed before use of the product, and that is water soluble is considered as part of the formulation.

Note that if the raw material contains impurities listed in this appendix, write the amount at the end of the appendix. The manufacturer of the Nordic Swan Ecolabelled product is responsible for calculating compliance with the requirements of the criteria.

Raw material/ ingredient(s)	Chemical name	INCI name	CAS no.	Amount in weight-%	Function of the raw material/ ingredient	Suggested DID-no.

Please note that:

- the definition of a surfactant: Any organic substance, which has surface-active properties, and which consists of one or more hydrophilic and one or more hydrophobic groups of such a nature and size that it is capable of reducing the surface tension of water.
- the DID-list is available from the Nordic Ecolabelling web pages
- the information in this declaration is internally shared with certification personnel in Nordic Ecolabelling to be used in evaluation of applications of chemical technical products.

O4: Palm oil/palm kernel oil	YES	NO
Does the raw material contain palm oil or palm kernel oil? This includes by-products, residues, and waste fractions from palm oil industries, such as palm fatty acid distillate and palm effluent sludge. If yes , is this palm oil/palm kernel oil RSPO certified? What is the tracability level?		
Tick below and state the certificate/licence number:		
No traceability		
Identity Preserved		
Segregated

1,4-dioxane (CAS No. 123-91-1)		
Alkylphenols (AP) (e.g. butylated hydroxy anisole (BHA, CAS No. 25013-16-5), alkylphenol ethoxylates (APEO), and other alkylphenol derivatives (APD)		
Bisphenols and bisphenol derivatives with the following EC/List No.: 201-245-8 (BPA), 201-025-1 (BPB), 401-720-1 (4,4'-Isobutylethylidenediphenol), 216-036-7 (BPAF) and its 8 salts (278-305-5; 425-060-9; 443-330-4; 468-740-0; 469-080-6; 479-100-5; 943-265-6; 947-368-7), 201-250-5 (BPS), 201-240-0 (BPC), 204-279-1 (TBMD), 201-618-5 (6,6'-di-tert-butyl-4,4'-butylidenedi-m-cresol), 242-895-2, 248-607-1, 405-520-5 (D8), 217-121-1 (DAB), 227-033-5 (TMBPA), 210-658-2 (BPF), 411-570-9, 277-962-5 (contains BPS, 500-086-4 (contains BPA), 500-263-6 (contains BPA), 500-607-5 (contains BPA), 701-362-9, 904-653-0 (contains BPA), 908-912-9 (contains BPF), 926-571-4 (contains BPA), 931-252-8 (contains BPA), 941-992-3 (contains BPS), 943-503-9 (contains BPA).		
Benzalkonium chloride (CAS No. 63449-41-2)		
Boric acid, borates, and perborates		
Ethylenediamine tetraacetate (EDTA, CAS No. 6381-92-6) and its salts and Diethylenetriamine pentaacetate (DTPA, CAS No. 67-43-6) and its salts		
Halogenated or aromatic solvents		
Microplastics: Synthetic polymer microparticles as defined in the Restriction List (entry 78) of the amended Annex XVII to the REACH Regulation (EC) No 1907/2006. The following "Conditions of restriction" paragraphs apply: 1 (concentration limit in mixtures), 2 (definitions), 3 (particle size limits). The remaining points do not apply, e.g. 4 (Paragraph 1 shall not apply to the placing on		

the market of:), e.g. 4(a) "synthetic polymer microparticles, as substances on their own or in mixtures, for use at industrial sites", 5 (derogations), e.g. 5 (b) "synthetic polymer microparticles the physical properties of which are permanently modified during intended end use in such a way that the polymer no longer falls within the scope of this entry"		
Nanomaterials/-particles, as defined in the cosmetic products regulation ((EC) No 1223/2009): Insoluble or biopersistent and intentionally manufactured materials with one or more external dimensions or an internal structure in the region of 1-100 nm.		
Nitro musks and polycyclic musk compounds		
Organic chlorine compounds, hypochlorous acid and hypochlorite		
Parabens (4-Hydroxybenzoic acid and its salts and esters)		
PBT and vPvB substances in accordance with REACH Annex XIII, including substances under investigation according to the ECHA PBT assessment list https://echa.europa.eu/pbt/-/dislist/details/0b0236e1889ab857		
Per- and polyfluorinated substances (PFAS) PFASs are defined as fluorinated substances containing at least one fully fluorinated methyl or methylene carbon atom (without any H / Cl / Br / I atom attached to it)		
Phthalates (esters of phthalic acid, CAS No. 88-99-3)		
Potential or identified endocrine disruptors, according to any of the following EU member state initiative "Endocrine Disruptor Lists": List I: https://edlists.org/the-ed-lists/list-i-substances-identified-as-endocrine-disruptors-by-the-eu List II: https://edlists.org/the-ed-lists/list-ii-substances-under-eu-investigation-endocrine-disruption List III: https://edlists.org/the-ed-lists/list-iii-substances-identified-as-endocrine-disruptors-by-participating-national-authorities		
Quaternary ammonium compounds, which are not readily aerobic biodegradable** (such as DTDMAC (CAS No. 68783-78-8), DSDMAC (CAS No. 107-64-7), DHTDMAC (CAS No. 61789-80-8) and DADMAC (CAS No. 7398-69-8)).		
Salicylic acid (CAS No. 69-72-7) and its salts (CAS No. 824-35-1 / 18917-89-0 / 59866-70-5 / 54-21-7 / 578-36-9 / 2174-16-5), benzyl salicylate (CAS No. 118-58-1), and ethyl-hexyl salicylate (CAS No. 118-60-5)		
Siloxanes, that are cyclic		
Siloxanes, that are linear		
Silver, colloidal silver and nanosilver		
Substances on the REACH Candidate list of SVHC https://www.echa.europa.eu/candidate-list-table		
Titanium dioxide (TiO ₂ , CAS No. 13463-67-7)		
Triclosan (CAS No. 3380-34-5)		
O8: Surfactants	YES	NO
Does the raw material contain surfactants? Surfactants are defined as any organic substance, which has surface-active properties, and which consists of one or more hydrophilic and one or more hydrophobic groups of such a nature and size that it is capable of reducing the surface tension of water. Substances on the DID-list with number 2001-23xx are considered surfactants and substances with number 2401-26xx are not considered surfactants.		
Does the raw material contain sodium lauryl sulphate (SLS)?		

O9-011: Fragrances	YES	NO
Does the raw material contain fragrance?		
If yes , answer the next three questions below.		
Does the raw material contain fragrances that are <i>not</i> added in line with the IFRA guidelines?		
Does the raw material contain fragrances that are H317/H334 classified or fragrance allergens listed in Annex III of the Cosmetics Regulation?		
Does the raw material contain the fragrance allergens oak moss extract (<i>Evernia prunastri</i> , CAS No. 90028-68-5) or tree moss extract (<i>Evernia furfuracea</i> , CAS 90028-67-4)?		
O12: Organic colorants	YES	NO
Does the raw material contain organic colourant?		
If yes , state log KoW/BCF or E-number:		
Does the raw material contain Carbon Black?		
O13: Preservatives	YES	NO
Does the raw material contain preservatives?		
If yes , state log KoW/BCF:		
Does the raw material contain preservatives that are <i>not</i> readily aerobic biodegradable?		
O14: UV filters	YES	NO
Does the raw material contain UV filters?		
If yes , state log KoW/BCF or lowest available NOEC/EC/LC50:		
O15: Does the raw material contain synthetic polymers with one or more residual monomers of the following properties > 100 ppm: <i>Incl. all classification variants. For example, H350 also covers classification H350i</i>	YES	NO
Carc. 1A or 1B H350		
Carc. 2 H351		
Muta. 1A or 1B H340		
Muta. 2 H341		
Repr. 1A or 1B H360		
Repr 2 H361		
Lact. H362		
Resp. Sens. 1, 1A or 1B H334		
Skin Sens. 1, 1A or 1B H317		

STOT SE 1 or 2 H370-H373		
Acute Tox. (oral) 1, 2 or 3 H300, H301		
Acute Tox. (dermal) 1, 2 or 3 H310, H311		
Acute Tox. (inhalation) 1, 2 or 3 H330, H331		
ED HH 1 or 2 EUH 380, EUH 381		
O16: Aluminium	YES	NO
Does the raw material contain aluminium? If yes , state the amount of aluminium corresponding to elemental %Al:		
O17: Environmentally hazardous substances	YES	NO
Does the raw material contain substances classified H410, H411 or H412? If yes , state the amount (% by weight) per classification:		
O21-O22: Oral products	YES	NO
Does the raw material contain colourants, preservatives or flavourings? If yes , state the E-number of colorants and preservatives: If flavouring : Does the flavouring substance meet the requirements in EU Regulation 1334/2008? If yes , state the FL-number of flavourings for which it is required by this regulation:		
Does the raw material contain mineral oil saturated hydrocarbons (MOSH) or mineral oil aromatic hydrocarbons (MOAH)?		
Does the raw material contain fluoride? If yes , state the content:		
Does the raw material contain water-soluble zinc salts? If yes , state the content:		
O23-O24: Decorative cosmetics and hair dyes	YES	NO
Is the raw material a colourant for decorative cosmetics or hair dye? If yes , answer the next three questions below.		
Does the colourant contain heavy metals?		

If yes, state type and content:		
Does the colourant contain Bismuth Oxochloride (CAS No. 7787-59-9)?		
Does the colourant contain lawsone (CAS No. 83-72-7), hydroxypropyl p-phenylenediamine or its dihydrochloride salt (CAS No. 928659-47-5 and CAS No. 73793-79-0) or hair dyes judged to be sensitising and/or allergenic by the SCCS (even if they do not meet the classification of H317 and/or H334)?		

If the answer to any of the above questions is yes, state the CAS No. (where possible), chemical name and level (in ppm, % by weight or mg/kg). Also, state whether the substance is contained in the form of an impurity or an ingoing substance.

--

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.

Place and date	Company name
Responsible person	Signature of responsible person
Telephone	Email

Appendix 3 Declaration on sensitising substances in the process water for wet wipe carrier material (v.1)

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Please inform Nordic Ecolabelling if new knowledge arises and submit an updated declaration.

Manufacturer/supplier
Wet wipe material (tradename and composition)

O26: Process water	YES	NO
Are sensitising substances with H317 and/or H334 used in the process water of the wet wipe material?		
If yes , does the concentration in the carrying material/wipe exceed 0.10 ppm per sensitising substance? Enclose an analysis report.		

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.

Place and date	Company name
Responsible person	Signature of responsible person
Telephone	Email

Appendix 4 Declaration from the manufacturer/supplier of the primary packaging component (v.3)

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Please inform Nordic Ecolabelling if new knowledge arises and submit an updated declaration. Please note that small amounts of impurities when using recycled materials are possible and do not affect fulfilment of the requirements.

Recycled material is defined in accordance with ISO 14021 in the following two categories:

- Material in the pre-consumer phase. Material that has been taken from the waste flow during the manufacturing process. The exception is the re-use of material that is generated in a process, e.g. waste that can be recycled within the same process that generated it.
- Material in the post-consumer phase. Material generated by households or by trade, industry, or institutional facilities in their role as end-users of a product that can no longer be used for its intended purpose. This includes the return of materials from the distribution chain.

Manufacturer/supplier
Packaging name and/or item number (write all the names/numbers this declaration covers)
Component of the packaging (container, closure, label)
Component weight
Packaging material (type of plastic, cardboard etc.). List all materials included in the packaging component and the percentage of each material.

O32: Aluminium packaging	YES	NO
Is the packaging made from aluminium that has parts or layers of other types metals?		
Is the aluminium made of > 99.5% pure aluminium??		
Does the aluminium packaging contain $\geq 60\%$ recycled material*? <i>* Please see definition above.</i>		
O32: Metal other than aluminium	YES	NO
Does the packaging contain metal (other than aluminium)?		
O32: Glass packaging	YES	NO
Does the glass contain $\geq 50\%$ recycled material*? <i>* Please see definition above.</i>		
O33: Plastic packaging	YES	NO
Does the primary packaging* have a RecyClass certificate showing that the primary packaging is fully recyclable with a minimum recyclability score of B? <i>* In accordance with EU Directive 94/62/EC on packaging and packaging waste, the term "primary packaging" is defined as consumer packaging, i.e., packaging conceived to constitute a sales unit to the final user or consumer at the point of sale.</i>		
Separability: Does the packaging have a threadneck?		
Is the rigid plastic component made from $\geq 99\%$ polyethylene (PE), $\geq 95\%$ polypropylene (PP) or $\geq 98\%$ polyethylene terephthalate? For PE and PP: Please state the density of the plastic: For PE and PP: Is the remaining material biodegradable or of a different material than PE or PP?		
Is the plastic component a film (e.g. a flexible pouch)? If yes , is it made from $\geq 95\%$ polyethylene (PE), $\geq 95\%$ polypropylene (PP) with a density $< 1.00 \text{ g/cm}^3$, or $\geq 98\%$ polyethylene terephthalate? Is the remaining material biodegradable?		
Is the component a dispensing system (e.g. dispensing pumps and valves, spray pumps, trigger pumps, bubble pumps, propellant nozzles and pipettes/droppers)? If yes , does the component contain parts made from other materials than $\geq 95\%$ polyethylene (PE), $\geq 95\%$ polypropylene (PP) or $\geq 98\%$ polyethylene terephthalate? If yes , please describe the part(s) of other materials: _____ If yes , does the dispensing system contain PVC or other halogenated plastics?		
If made of PET: Is the component transparent or coloured transparent?		
Has carbon black been added to the component?		
Are any barriers used in the component? If yes , please state barrier type:		

For closures: Does the component contain a membrane of nitril rubber (NBR)? If yes: What is the density of the nitril rubber (NBR) membrane?		
For closures: Does the component contain a membrane of silicone? If yes: What is the density of the silicone membrane? Does the silicone contain less than 1000 ppm of D4, D5 and D6?		
Is the component treated with PFAS* (on the inside or outside)? <i>* PFASs are defined as fluorinated substances containing at least one fully fluorinated methyl or methylene carbon atom (without any H / Cl / Br / I atom attached to it)</i>		
O34: Paper-based packaging	YES	NO
Does the packaging contain recycled material*? <i>* See definition above.</i>		
With reference to the percentage PCR in the wood raw material above: Is the remaining proportion of wood raw material covered by the FSC/PEFC control schemes (FSC controlled wood/PEFC controlled sources)? If yes, please state the percentage:		
Is the packaging laminated with any barrier material? If yes, please state the barrier material type: Is the laminate on one side only?		
Does the packaging contain PVC (polyvinyl chloride) or other types of halogenated plastics?		
Is the packaging material solid coloured in other colours than white?		
O36: Labels and direct print	YES	NO
Does the primary packaging* have a RecyClass certificate showing that the primary packaging is fully recyclable with a minimum recyclability score of B? <i>* In accordance with EU Directive 94/62/EC on packaging and packaging waste, the term "primary packaging" is defined as consumer packaging, i.e., packaging conceived to constitute a sales unit to the final user or consumer at the point of sale.</i>		
Is the label made of plastic? If yes, does the polymer composition of the label material (excluding adhesive and print) consist of $\geq 99\%$ polyethylene (PE) or $\geq 95\%$ polypropylene (PP) with a density $< 1 \text{ g/cm}^3$, or PET? Please specify the density in g/cm^3 : If the label is made of PP, is the label a fold-out (cross-over) label? If the label is made of PET, which type of PET is it made of?		
For paper packaging: Is the label made of paper? Is the glue water soluble? Is the weight of the label $< 5\%$ of the total weight of the paper/cardboard packaging?		
Is the printing ink used compliant with EuPIA's exclusion policy*? <i>* https://www.eupia.org/wp-content/uploads/2024/03/20240313-EuPIA_Exclusion_Policy_for_Printing_Inks_and_Related_Products_-March-2024_6th-Edition-v1-1.pdf</i>		

O38 Dosability/dosing systems	YES	NO
Is the component a pump for liquid hand soap?		
If yes, does the pump provide more than 2 g soap per full press?		

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.

Place and date	Company name/
Responsible person	Signature of responsible person
Telephone	Email

Appendix 5 Declaration from the manufacturer of the primary packaging component – cardboard packaging for liquid products (v.1)

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Please inform Nordic Ecolabelling if new knowledge arises and submit an updated declaration. Please note that small amounts of impurities when using recycled materials are possible and do not affect fulfilment of the requirements.

Please note that small amounts of impurities when using recycled materials are possible and do not affect fulfilment of the requirements.

Packaging manufacturer	Trademark/trade name of the primary packaging:
-------------------------------	---

Sustainable material and design for recycling (requirement O35)

How should the packaging component be recycled? (E.g. as cardboard or plastic packaging) (O18)

--

Constituent materials

Please fill in all fields in the table below. Materials such as paper/paperboard, coating materials, and closure materials must be listed. Additives or chemicals such as printing inks or chemicals within the pulp/paper does not need to be listed.

Material	Function	Weight of the material [g]	% by weight of the material as a ratio of the total weight of the packaging	Is the material bio-based*? State Yes/No	Is the material post- consumer/commercial recycled**? State Yes/No
Total			100 %		

Overview of materials, suppliers and weights

** Bio-based means that the material consists of biomass that may have undergone physical, chemical or biological treatment(s). Biomass has a biological origin but excludes material that is found embedded in geological and/or fossil formations. Examples of biomass are: (all or parts of) plants, trees, algae, marine organisms, microorganisms, animals, etc.*

*** Post-consumer/commercial recycled material is defined in the requirement according to ISO 14021:2016:*

"Post-consumer/commercial" is defined as material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

Pulp/paper

Ratio of bio-based material/recycled material in the packaging: _____

State the percentage by weight of the pulp/paper that originates from forestry certified under the FSC or PEFC schemes: _____

State the percentage (by weight) of the pulp/paper that is post- consumer/commercial recycled**: _____

	YES	NO
With reference to the percentages above. Is the remaining proportion of wood raw material covered by the FSC/PEFC control schemes (FSC controlled wood/PEFC controlled sources)?		
Bio-based plastic	YES	NO
Has palm oil been used as a raw material, other than as secondary raw material***?		
Has soy been used as a raw material, other than as secondary raw material***?		
Has sugar cane been used as a raw material, other than as a secondary raw material***?		
<i>*** Secondary raw materials are defined here as residual products from other production processes, such as waste products from the food industry, by-products such as straw from grain production, by-products from maize and dried palm leaves. Palm fatty acid distillate (PFAD) from palm oil is not counted as a residual/waste product</i>		
Materials excluded from use	YES	NO
Does the packaging contain PVC or other types of halogenated plastics?		
Does the packaging contain aluminium or other metals?		
Printing	YES	NO
Is any print done as direct printing on the packaging?		
If yes , are all inks that are used on the cardboard in the packaging water-based?		

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.

Place and date	Company name/stamp
Responsible person	Signature of responsible person
Telephone	E-mail

Appendix 6 Packaging calculations

1. Calculation of coverage of label on PET packaging

Below follows a description of how the calculation of coverage of labels on PET containers should be carried out. The calculations can be done in Nordic Ecolabelling's calculation sheet for packaging.

Calculation for a non-cylindrical bottle:

The calculation of the percentage shall be based on the two-dimensional profile of the container i.e., the area of the top and bottom of the packaging and the sides of a box/container/bottle/can shall not be included in the calculation. If the label on the front of pack and back of the packaging are of different size, the maximum percentage shall be fulfilled for each side separately.

The illustration below shows an example of the measurements involved in the calculation of the total area of a non-cylindrical container:

The following formulas can be used to calculate the area:

$$\text{Area } A_1 = c \cdot h_1$$

$$\text{Area } A_2 = \frac{h_2 \cdot (c + d)}{2}$$

$$\text{Total area } A = A_1 + A_2$$

Calculation for a cylindrical bottle:

For a cylindrical container, the calculation shall be based on the three-dimensional profile excluding the bottom and top of the container.

The illustration below shows the measurements involved in the calculation of the total area of a cylindrical container:

The following formulas can be used to calculate the area:

$$\text{Area } A_1 = 2 \cdot \pi \cdot b \cdot h_1$$

$$\text{Area } A_2 = \pi \cdot (b + a) \cdot \sqrt{h_2^2 + (b - a)^2}$$

$$\text{Total area } A = A_1 + A_2$$

2. Amount of packaging

The amount of packaging compares the amount of packaging material with the content using the following formula:

$$\frac{\sum(mf_i \cdot W_{\text{material } i})}{t} \leq a \cdot Vol_{\text{product}} + b$$

mf_i = Material factor for type of material divided into the following three materials:

$$mf_{\text{paper/cardboard}} = 0.4$$

$$mf_{\text{plastic}} = 1.0$$

$$mf_{\text{plastic laminate}} = 1.0$$

$$mf_{\text{aluminium}} = 1.6$$

$$mf_{\text{glass}} = 0.6$$

$W_{\text{material } i}$ = Weight of the packaging component (including label + information sheet) in grams

t = Reuse factor (t=1 for packaging which is not reused for the same purpose, t > 1 if the product is sold with a refill or for the purpose of multiple refills, e.g. t = 5 if the amount of refills is 4.)

Vol_{product} = Volume of the product in ml

a and b are constants that vary for different packaging types:

Packaging type	a	b
Regular pPump bottle	0.05	28
Foam pump bottle	0.035	52
Airless packaging	0.36	19
Tube	0.1	7.5
Bottle	0.065	15
Jar	0.08	35
Stick + roll on	0.2	24
Wet wipes*	0.098	8
Propellant bottles	0.4	10
Solid soaps, shampoo etc.	0.025	0.4
Diverse	0.013	15

* Wet wipes use the same equation as above, but volume of the product is replaced by the number of wet wipes in the packaging.

Below follows examples of packaging within a few categories. If you are unsure of in which category your packaging fits into, please ask your contact at Nordic Ecolabelling.

- Regular pump bottle includes bottles with regular pumps and trigger sprays.
- Foam pump bottle includes bottles with foam pumps.
- Airless includes all packaging designed to completely empty the packaging of product.
- Bottle includes all regular bottles with a flip cap, squeeze bottles, etc., without a pump
- Jars includes jars with a screw-on top
- Stick + roll-on includes all sticks, e.g. lip balm, sun sticks, and all roll-on, e.g. deodorant
- Propellant bottles includes bottles, usually in aluminium, with a propellant gas
- Solid soaps, shampoo etc. includes all solid products.
- Diverse is for packaging not mentioned above, it could e.g. a be bottle with pipette, pouches, bag-in-a-box.

Example calculation

Example calculation for a 200 ml product with a pump that is not sold with a refill (plastic packaging including pump weighs 37 g in total):

$$\frac{\sum(mf_i \cdot W_{material_i})}{t} \leq a \cdot Vol_{product} + b$$

$$\frac{\sum(mf_i \cdot W_{material_i})}{t} \leq 0.05 \cdot Vol_{product} + 28$$

$$\frac{\sum(1.0 \cdot 37g)}{1} \leq 0.05 \cdot 200 + 28$$

$$\frac{37g}{1} \leq 10 + 28$$

$$37 \leq 38 \Rightarrow OK$$

3. Emptying level

The amount of product remaining in the packaging (R), which must be less than 10% is calculated using the following formula:

$$R = \frac{(m_2 - m_3)}{m_1 - m_3} \cdot 100\%$$

where:

m_1 = mass of primary packaging and product (g)

m_2 = mass of primary packaging and remainder of product in normal conditions (g)

m_3 = mass of empty and clean primary packaging (g)

Normal conditions of use are defined as:

- Pump bottle: Repeatedly press the mouth of the pump. If nothing has come out of the packaging after 5 presses in a row, the packaging is considered to be empty. The mouth of the pump may not be taken apart and water must not be introduced in the packaging.
- Vials/flasks: The vial is turned upside down, with the cap in the downward position and is pressed as it would usually be pressed when using the product. When the trickle is not continuous, the bottle is left in the same position for a maximum of 24 hours. The bottle can also be hit on the table which corresponds to normal consumer behaviour. Neither the cap is dismantled, nor water is introduced inside the packaging.

The packaging is approved if an average of 3 tests come in below the limit. The same test can be used for products that are similar but have different perfumes or colours. The products must be the same viscosity.

Appendix 7 Analysis laboratory and test methods

1. Requirements for analysis laboratory

The analysis laboratory shall fulfil the general requirements of standard EN ISO/IEC 17025 or have official GLP status.

2. Approved test methods

International test methods (OECD Guidelines for Testing of Chemicals, ISBN 92-64-1222144) or equivalent methods must be used for documentation. If equivalent methods are used, these must be assessed by an independent body and approved by Nordic Ecolabelling to ensure that the results are equivalent. The relevant test methods are stated in the below sections. Calculations from data models (such as BIOWIN) are accepted, if they are assessed by an independent body, but if the results of the model calculations are close to the threshold values or if Nordic Ecolabelling has contradictory data, more certain information may be required.

3. Aquatic toxicity

For acute aquatic toxicity, test methods no. 201, 202, 203*, and 212* in the OECD Guideline are used. For chronic aquatic toxicity test methods no. 210*, 211, 215* and 229* in the OECD Guideline are used. OECD 201 can be used as chronic test if chronic endpoints are chosen.

** The Commission prohibited animal testing of ingredients for cosmetic products from March 2009 onwards. To determine aquatic toxicity, however, the prohibition only concerns testing with fish (does not include invertebrates). As such, OECD test guideline no. 203 (acute toxicity – fish), 210, 215 and 229 (chronic toxicity – fish) cannot be used to document acute/chronic toxicity in the future. The results of acute/chronic toxicity testing using fish produced before March 2009 may still be used, however.*

4. Bioaccumulation

Unless otherwise proven, a substance is considered bioaccumulating if tested for bioaccumulation on fish according to method OECD 305 A-E* or OECD 321 and its bioconcentration factor (BCF) is >500 . If no BCF value has been determined, a substance is considered bioaccumulating if its logKow value ≥ 4.0 according to method 107, 117 or 123 in the OECD Guidelines for the Testing of Chemicals or equivalent method. If the maximum measured BCF ≤ 500 , the substance is not considered bioaccumulating even if logKow ≥ 4.0 .

OECD test method 107 cannot be applied to surfactants which have both fat and water-soluble properties. Based on what is known today, for such substances it must be demonstrated with a high degree of certainty that they and their degradation products do not pose any risk to aquatic organisms over a longer time perspective.

** The Commission prohibited animal testing of ingredients for cosmetic products from March 2009 onwards. As such, OECD test guideline no. 305 (bioconcentration factors), cannot be used to document bioaccumulation in the future. Results produced before March 2009 may still be used, however.*

5. Aerobic biodegradability

For aerobic biodegradability test method no. 301 (A to F), 306 or 310 in the OECD Guidelines are used.

6. Potential aerobic biodegradability

For potential (inherently) biodegradability test method no. 302 (A to C) in the OECD Guidelines are used.

7. Anaerobic biodegradability

For anaerobic degradability test method no. 311 in the OECD Guidelines, ISO 11734, or ECOTOC no. 28 (June 1988) are used.

Substances that are not surfactants and which are not included in the DID-list or for which data is missing on DID-list list may be exempt from the requirements on anaerobic degradability if they fulfil all the following requirements:

- Not toxic to aquatic organisms (NOEC/EC_x > 0.1 mg/l or E/LC₅₀ > 10 mg/l)
- Readily aerobically biodegradable
- Have low adsorption (A < 25%) or high desorption (D > 25%) or are not bioaccumulating

Testing for adsorption/desorption can be carried out under OECD guidelines 106 or under ISO CD 18749” Water quality - Adsorption of substances on activated sludge - Batch test using specific analytical methods”.

8. DID-list

The DID-list, Detergent Ingredient Database has been developed to facilitate the ecolabel application process and is a tool to rank chemicals and thus make it easier for licence holders and producers to choose less environmentally harmful chemicals in their products. The list contains information on toxicity and degradability of several substances that are used in chemical products.

The substances on the DID-list cannot be seen as an overview of substances that are contained in ecolabelled products, and the DID-list cannot be used to document the toxicity of the individual substances in connection with the classification rules. Here, information from safety data sheets, literature or the raw materials producer must be used.

The DID-list can be obtained from the ecolabelling organisation or the website of the respective country. If a substance is not included on the DID-list, or biodegradability data is missing, the methods described in part B of the DID-list must be used. For these criteria, the DID-list dated 2023 or later versions apply.

Appendix 8 Overview of documentation requirements per criteria document referenced in requirement O25 Wipe material

This appendix gives a overall overview of the documentation requirements for each wet wipe carrier material per criteria document, as referenced in requirement O25 to these criteria. For full details on the documentation requirements, please see each referenced criteria document.

Nordic Swan Ecolabel, Protective and absorbent hygiene products 023 version 7 or later

Regenerated cellulose

Requirement	Documentation requirement	Documented by:
O2 section 3	Appendix 1, Form 10a	Manufacturer of pulp
O17 + O18	Appendix 1, Form 6	Manufacturer of regenerated cellulose fibre
O26	Appendix 1, Form 10a, including method of analysis, test frequency, and the compliance of laboratory with the laboratory requirements	Manufacturer of pulp
	Appendix 1, Form 10b, including method of analysis, test frequency, and the compliance of laboratory with the laboratory requirements	Manufacturer of regenerated cellulose fibre
O27	Appendix 1, Form 10a, including method of analysis, test frequency, and the compliance of laboratory with the laboratory requirements	Manufacturer of pulp
	For part a): Documentation showing that the regenerated cellulose fibres are produced via a closed loop process or	Manufacturer of regenerated cellulose fibre
	For part b): Form 10b, including test results, method of analysis, test frequency, and compliance of the laboratory with the laboratory requirements	Manufacturer of regenerated cellulose fibre
O35	Appendix 1, Form 16	Manufacturer of non-woven material
O36	Appendix 2a for each chemical (excluding binders/adhesives)	Manufacturer of non-woven material
	Appendix 2b for each binder/adhesive (if used in the non-woven material)	Manufacturer of non-woven material
	SDS for all chemical products used in the production of the nonwoven material.	Manufacturer of non-woven material

Cellulose-based pulp/fluff pulp

Requirement	Documentation requirement	Documented by:
O2 section 3	Appendix 1, Form 5	Manufacturer of fluff pulp
O17 + O18	Appendix 1, Form 6	Manufacturer of fluff pulp
O19	Appendix 1, Form 5	Manufacturer of fluff pulp
	A valid FSC/PEFC Chain of Custody certificate / link to certificate in FSC/PEFC certificate database covering all wood raw material used in the pulp.	Manufacturer of fluff pulp

	A list of the chemical products added to the finished pulp/fluff pulp including trade name, manufacturer, function and amount used (kg/ADt). Product safety data sheets for chemical products shall be included upon request.	Manufacturer of fluff pulp
O20	Declared in the MSA portal	Manufacturer of fluff pulp
O35	Appendix 1, Form 16	Manufacturer of non-woven material
O36	Appendix 2a for each chemical (excluding binders/adhesives)	Manufacturer of non-woven material
	Appendix 2b for each binder/adhesive (if used in the non-woven material)	Manufacturer of non-woven material
	SDS for all chemical products used in the production of the nonwoven material.	Manufacturer of non-woven material

Cotton and other natural cellulosic fibres

Requirement	Documentation requirement	Documented by:
O2 section 3	Appendix 1, Form 9	Manufacturer of cotton/cellulosic fibre
O23	Appendix 1, Form 9	Manufacturer of cotton/cellulosic fibre
O24	Appendix 1, Form 9	Manufacturer of cotton/cellulosic fibre
	- Valid certificate showing that the cotton and other seed fibres were organically cultivated in line with the standards in the requirement. If the supplier is the holder of GOTS certification, the requirement must be documented with a transaction certificate showing that the goods supplied are GOTS certified.	Manufacturer of cotton/cellulosic fibre
	- Documentation showing that the producer of the wipe material has purchased organically cultivated cotton.	Manufacturer of non-woven material
O25	If additives to cotton: Appendix 1, Form 2a and an SDS for each additive	Manufacturer of cotton/cellulosic fibre
O35	Appendix 1, Form 16	Manufacturer of non-woven material
O36	Appendix 2a for each chemical (excluding binders/adhesives)	Manufacturer of non-woven material
	Appendix 2b for each binder/adhesive (if used in the non-woven material)	Manufacturer of non-woven material
	SDS for all chemical products used in the production of the nonwoven material.	Manufacturer of non-woven material

EU Ecolabel, Absorbent hygiene products 2023/1809/EU

Regenerated cellulose

Requirement	Documentation requirement	Documented by:
Sub-criterion 2.1	A valid chain of custody certificates for the suppliers of dissolved pulp used	Manufacturer of pulp
	Documentation showing that at least 70% of the wood raw material is certified (FSC, PEFC or equivalent)	Manufacturer of pulp
	Documentation showing that the remaining proportion of wood material is controlled wood covered by a verification system.	Manufacturer of pulp

Sub-criterion 2.2	Declaration that elemental chlorine (Cl ₂) gas was not used	Manufacturer of pulp
	Measurements of AOX emissions	Manufacturer of pulp
Sub-criterion 2.3	Documentation and evidence that the required proportion of dissolving pulp suppliers has the appropriate energy generating equipment or co-product recovery and manufacturing systems installed at the related production sites	Manufacturer of pulp
Sub-criterion 7.1	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material
	A list of all chemicals used	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.2	A signed declaration that the wet wipe carrier material do not contain any SVHCs	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.3	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material

Cellulose-based pulp/fluff pulp

Requirement	Documentation requirement	Documented by:
Sub-criterion 1.1	A valid, independently certified chain of custody certificates for the suppliers of the fluff pulp used	Manufacturer of pulp
	Audited accounting documents showing at least 70% of the wood raw material is certified (FSC, PEFC or equivalent)	Manufacturer of pulp
	Documentation showing that the remaining proportion of wood material is controlled wood covered by a verification system.	Manufacturer of pulp
	If the fluff pulp is used in an air-laid material, then the air-laid material supplier shall allocate credits to the air-laid delivered to the product, providing invoices to support the number of credits allocated.	Manufacturer of pulp
Sub-criterion 1.2	Declaration that elemental chlorine (Cl ₂) gas was not used	Manufacturer of pulp
	Measurements of AOX emissions	Manufacturer of pulp
Sub-criterion 1.3	Detailed calculations and test data showing compliance with this sub-criterion	Manufacturer of pulp
Sub-criterion 1.4	Data and detailed calculations showing compliance with this sub-criterion	Manufacturer of pulp
Sub-criterion 1.5	Total electricity and fuel consumption, together with the calculations and related supporting documentation showing compliance with this sub-criterion	Manufacturer of pulp
Sub-criterion 7.1	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material
	A list of all chemicals used	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.2	A signed declaration that the wet wipe carrier material do not contain any SVHCs	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.3	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material

Cotton and other natural cellulosic fibres

Requirement	Documentation requirement	Documented by:
Sub-criterion 3.1	a) Certificate from independent control body of organically grown fibre b) Traceability of fibres grown in accordance with a)	Manufacturer of cotton/cellulosic fibre
Sub-criterion 3.2	Declaration that bleaching is only done with TCF technologies	Manufacturer of cotton/cellulosic fibre
Sub-criterion 7.1	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material
	A list of all chemicals used	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.2	A signed declaration that the wet wipe carrier material do not contain any SVHCs	Manufacturer of non-woven material
	SDS for each chemical used	Manufacturer of non-woven material
Sub-criterion 7.3	A signed declaration of compliance with the sub-criterion	Manufacturer of non-woven material

Nordic Swan Ecolabel, Textiles version 5.4 or later

Fibres must be licensed or fulfill the requirements listed in the tables below:

Regenerated cellulose

Requirement	Documentation requirement	Documented by:
O23 (if recycled textile fibre)	Appendix 13	Manufacturer of regenerated cellulose
	Certificate on recycled material	Producer/supplier of fibre
	Documentation showing 100% of the material is recycled	Producer/supplier of fibre
O24	Appendix 13	Manufacturer of regenerated cellulose
	Declaration that tree species listed in points a-d) are not used	Manufacturer of regenerated cellulose
	If tree species in points a-d) are used, please see criteria document	Manufacturer of regenerated cellulose
O25	Appendix 13	Manufacturer of regenerated cellulose
	Documentation on traceability and certified raw materials, please see criteria document	Manufacturer of regenerated cellulose or dissolving pulp
O26	Appendix 13	Manufacturer of regenerated cellulose
O27	Appendix 13	Manufacturer of regenerated cellulose
	Documentation showing that at least 50% of the fibre production is based on closed-loop processes.	Manufacturer of regenerated cellulose
O30 (if recycled fibres are used)	Appendix 15	Supplier of fibre
	Test report or Oeko-Tex 100 Class I certificate showing fulfilment of the requirement	Producer/supplier of fibre
O31 (if additives, treatment or coatings is added)	Appendix 16	Producer/supplier of fibre
	SDS for all chemicals used	Producer/supplier of fibre
O33-O41	Overview of all chemicals used in every production process and from which supplier	Manufacturer of non-woven material
	SDS for each chemical product	Manufacturer of non-woven material
	Appendix 17	Manufacturer of non-woven material

Cotton and other natural cellulosic fibres

Requirement	Documentation requirement	Documented by:
O14	Appendix 9	Manufacturer/supplier of cotton fibre
	Certificate for organically grown cotton (if used)	Manufacturer/supplier of cotton fibre
	Certificate for recycled fibres (if used)	Manufacturer/supplier of cotton fibre
O30 (if recycled fibres are used)	Appendix 15	Manufacturer/supplier of cotton fibre
	Test report or Oeko-Tex 100 Class I certificate showing fulfilment of the requirement	Manufacturer/supplier of cotton fibre
O31 (if additives, treatment or coatings is added)	Appendix 16	Producer/supplier of fibre
	SDS for all chemicals used	Producer/supplier of fibre
O33-O41	Overview of all chemicals used in every production process and from which supplier	Manufacturer of non-woven material
	SDS for each chemical product	Manufacturer of non-woven material
	Appendix 17	Manufacturer of non-woven material

Flax, bamboo, hemp and bast fibres

Requirement	Documentation requirement	Documented by:
O16	Valid certificate from European Flax Standard or equivalent	Producer/supplier of fibre
O17	Appendix 11	Producer/supplier of fibre
	Test report showing that the requirement is fulfilled	Producer/supplier of fibre
O30 (if recycled fibres are used)	Appendix 15	Producer/supplier of fibre
	Test report or Oeko-Tex 100 Class I certificate showing fulfilment of the requirement	Producer/supplier of fibre
O31 (if additives, treatment or coatings is added)	Appendix 16	Producer/supplier of fibre
	SDS for all chemicals used	Producer/supplier of fibre
O33-O41	Overview of all chemicals used in every production process and from which supplier	Manufacturer of non-woven material
	SDS for each chemical product	Manufacturer of non-woven material
	Appendix 17	Manufacturer of non-woven material

Nordic Swan Ecolabel, Tissue paper version 6.0 or later

The tissue paper must be licensed. Please provide valid licence number for the product used in the wet wipe.

EU Ecolabel Tissue paper 2019/70/EU

The tissue paper must be licensed. Please provide valid licence number for the product used in the wet wipe.
