

Appendix 5 Declaration from the manufacturer of the primary packaging component – cardboard packaging for liquid products

To be used in conjunction with an application for a licence for the Nordic Swan Ecolabel of cosmetic products.

This declaration is based on the knowledge we have at the time of the application, based on tests and/or declarations from raw material manufacturers, with reservations for new advances and new knowledge. Please inform Nordic Ecolabelling if new knowledge arises and submit an updated declaration. Please note that small amounts of impurities when using recycled materials are possible and do not affect fulfilment of the requirements.

Please note that small amounts of impurities when using recycled materials are possible and do not affect fulfilment of the requirements.

Packaging manufacturer	Trademark/trade name of the primary packaging:

Sustainable material and design for recycling (requirement O35)

How should the packaging component be recycled? (E.g. as cardboard or plastic packaging) (O18)

Constituent materials

Please fill in all fields in the table below. Materials such as paper/paperboard, coating materials, and closure materials must be listed. Additives or chemicals such as printing inks or chemicals within the pulp/paper does not need to be listed.

Material	Function	Weight of the material [g]	% by weight of the material as a ratio of the total weight of the packaging	Is the material bio-based*? State Yes/No	Is the material post- consumer/commercial recycled**? State Yes/No
Total			100 %		

Overview of materials, suppliers and weights

** Bio-based means that the material consists of biomass that may have undergone physical, chemical or biological treatment(s). Biomass has a biological origin but excludes material that is found embedded in geological and/or fossil formations. Examples of biomass are: (all or parts of) plants, trees, algae, marine organisms, microorganisms, animals, etc.*

*** Post-consumer/commercial recycled material is defined in the requirement according to ISO 14021:2016:*

"Post-consumer/commercial" is defined as material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

Pulp/paper

Ratio of bio-based material/recycled material in the packaging: _____

State the percentage by weight of the pulp/paper that originates from forestry

certified under the FSC or PEFC schemes: _____

State the percentage (by weight) of the pulp/paper that is post- consumer/commercial recycled**: _____

	YES	NO
With reference to the percentages above. Is the remaining proportion of wood raw material covered by the FSC/PEFC control schemes (FSC controlled wood/PEFC controlled sources)?		
Bio-based plastic	YES	NO
Has palm oil been used as a raw material, other than as secondary raw material****?		
Has soy been used as a raw material, other than as secondary raw material****?		
Has sugar cane been used as a raw material, other than as a secondary raw material****?		
*** Secondary raw materials are defined here as residual products from other production processes, such as waste products from the food industry, by-products such as straw from grain production, by-products from maize and dried palm leaves. Palm fatty acid distillate (PFAD) from palm oil is not counted as a residual/waste product		
Materials excluded from use	YES	NO
Does the packaging contain PVC or other types of halogenated plastics?		
Does the packaging contain aluminium or other metals?		
Printin	YES	NO
Is all print done as direct printing on the packaging?		
If yes , are all inks that are used water-based?		

In the event of any change to the composition of the product, a new declaration of fulfilment of the requirements is to be submitted to Nordic Ecolabelling.
